aspects as intra and interspecific relationships and physiological mechanisms aimed at avoiding stress and exploitation of limited resources This increasing interest stems not only from an inclination for this particular ecological system and some of its typical inhabitants but also from the realization that rocky and sandy shore communities are suitable models for testing and improving some global theories of evolutionary biology behavioural ecology and sociobiology The number of eco physiological and eco ethological problems emerging from the study of intertidal animals is fascinatingly large and a complete understanding of this environment cannot be reached using a strictly reductionistic or a pure holistic approach
