Fletcher-class Destroyers Alan Raven, 1986 *US Navy Gun Destroyers 1945-88* Mark Stille, 2023-10-26 An illustrated

history of the long Cold War careers of the US Navy's last gun destroyers from the modernized World War II era Fletcher class to the Forrest Sherman class. The finest American destroyers of World War II had surprisingly long careers into the Cold War and the missile age. The 175 strong Fletcher class was the largest class of US Navy destroyers ever built and most received some modernization after World War II. A handful were converted into ASW (Anti Submarine Warfare) escorts and one was even converted into the US Navy's first guided missile destroyer. Many Sumner class destroyers were also kept in service with the last decommissioned in 1973. The Gearing class was the classic US Navy wartime destroyer to have a second Cold War career, some being modified into picket ships and others into ASW escorts. Ninety-five were extensively modernized under the Fleet Modernization and Rehabilitation (FRAM) program which allowed them to serve until 1980. The majority of these ships then saw service with foreign navies. However, the story of Cold War gun destroyers is not just one of World War II relics. Commissioned in the 1950s, the 18 ships of the Forrest Sherman class were the US Navy's last all-gun destroyers and were considered to be the pinnacle of US Navy gun destroyer design. Later in their careers, most were modernized for ASW and anti-air warfare. The virtually unknown Norfolk class was originally built as a destroyer leader and maximized for ASW, but only two were modernized and the other three retired early. Many of these ships, such as USS Edson, Cassin Young, and Turner Joy, still survive as museum ships today. Using battlescene artwork, detailed illustrations, and photos, this book explores the careers, modernizations, and roles of all these unsung Cold War stalwarts: the last gun destroyers of the US Navy.

USS Kidd David Doyle, 2012. Fletcher class destroyers were the mainstay of the US Navy's destroyer force during WWII. With 175 of the class commissioned, the Fletchers were the most numerous of the US "Tin Cans" as destroyers are affectionately known. Today, only one of the type has been preserved in WWII configuration: the USS Kidd. Named after Rear Admiral Isaac C. Kidd, who gave his life on the bridge of his flagship USS Arizona at Pearl Harbor, the destroyer USS Kidd DD 661 conducted two years of successful operations in the Atlantic and Pacific during WWII before being struck by a kamikaze on 11 April 1945. In that incident, Kidd lost 38 of her crewmen killed and another 55 wounded. After repairs, the destroyer rejoined the fleet only to be decommissioned after the war. Recommissioned and brought back to active service during the Korean War, Kidd remained an active Naval vessel until she was decommissioned for the final time in 1964.

The American Destroyer USS Fletcher 1942 Waldemar Góralski, 2020-04-19. When in the early 1930s the Americans began modernizing their navy, they considered the replacement of old destroyers from the Great War as one of the most urgent tasks. However, the new projects disappointed and dissatisfied the sailors. Some of these vessels were heavily overloaded, e.g.

Sims class and early Benson ships as a result some of the weaponry had to be removed By proceeding with the design of subsequent series of destroyers efforts were made to respect the Treaty restrictions London 1936 The originally formulated requirements envisaged a destroyer with a displacement of 1 600 tons and armament consisting of not less than 4 5 inch 127 mm guns and 10 x 533mm torpedo tubes and a speed of 36 knots There were six variants of vessels slightly different from earlier Benson and Sims classes It soon became apparent that additional requirements could not be met within the limits of this displacement This mainly concerned making space for a 28 mm quadruple automatic cannon and more powerful ASuW weapons
