Flight To Extinction:

A Feathered River Across the Sky Joel Greenberg, 2014-01-30 The epic story of why passenger pigeons became extinct and what that says about our current relationship with the natural world When Europeans arrived in North America 25 to 40 percent of the continent's birds were passenger pigeons traveling in flocks so massive as to block out the sun for hours or even days The downbeats of their wings would chill the air beneath and create a thundering roar that would drown out all other sound John James Audubon impressed by their speed and agility said a lone passenger pigeon streaking through the forest passes like a thought How prophetic for although a billion pigeons crossed the skies 80 miles from Toronto in May of 1860 little more than fifty years later passenger pigeons were extinct The last of the species Martha died in captivity at the Cincinnati Zoo on September 1 1914 As naturalist Joel Greenberg relates in gripping detail the pigeons propensity to nest roost and fly together in vast numbers made them vulnerable to unremitting market and recreational hunting The spread of railroads and telegraph lines created national demand that allowed the birds to be pursued relentlessly Passenger pigeons inspired awe in the likes of Audubon Henry David Thoreau James Fenimore Cooper and others but no serious effort was made to protect the species until it was too late Greenberg's beautifully written story of the passenger pigeon paints a vivid picture of the passenger pigeon's place in literature art and the hearts and minds of those who witnessed this epic bird while providing a cautionary tale of what happens when species and natural resources are not harvested sustainably *Flight Ways* Thom van Dooren, 2014-06-03 A leading figure in the emerging field of extinction studies Thom van Dooren puts philosophy into conversation with the natural sciences and his ethnographic encounters to vivify the cultural and ethical significance of modern day extinctions Unlike other meditations on the subject *Flight Ways* incorporates the particularities of real animals and their worlds drawing philosophers natural scientists and general readers into the experience of living among and losing biodiversity Each chapter of *Flight Ways* focuses on a different species or group of birds North Pacific albatrosses Indian vultures an endangered colony of penguins in Australia Hawaiian crows and the iconic whooping cranes of North America Written in eloquent and moving prose the book takes stock of what is lost when a life form disappears from the world the wide ranging ramifications that ripple out to implicate a number of human and more than human others Van Dooren intimately explores what life is like for those who must live on the edge of extinction balanced between life and oblivion taking care of their young and grieving their dead He bolsters his studies with real life accounts from scientists and local communities at the forefront of these developments No longer abstract entities with Latin names these species become fully realized characters enmeshed in complex and precarious ways of life sparking our sense of curiosity concern and accountability toward others in a rapidly changing world *Flight*, 1927 *The American Naturalist*, 1886 **Patterns**, 1982 **Strickberger's Evolution** Brian Hall, Benedikt Hallgrímsson, 2008 Thoroughly updated and reorganized Strickberger's *Evolution* Fourth Edition presents biology students with a basic introduction to prevailing knowledge and

ideas about evolution discussing how why and where the world and its organisms changed throughout history Keeping consistent with Strickberger s engaging writing style the authors carefully unfold a broad range of philosophical and historical topics that frame the theories of today including cosmological and geological evolution and its impact on life the origins of life on earth the development of molecular pathways from genetic systems to organismic morphology and function the evolutionary history of organisms from microbes to animals and the numerous molecular and populational concepts that explain the earth s dynamic evolution

Species Diversity and Community Structure Teiji Sota,Hideki Kagata,Yoshino Ando,Shunsuke Utsumi,Takashi Osono,2013-08-30 This book introduces recent progress in the study of species diversity and community structures in terrestrial organisms conducted by three groups at Kyoto University First it explains species diversity and the functioning of fungi in Asian regions as outlined by metagenomic approaches using next generation sequencing technology The advances in high throughput sequencing technologies accelerate the speed of species inventorying especially for microorganisms Second the study of complex interactions between herbivorous insects and plants in the community and ecosystem contexts is presented Recent studies in community and ecosystem genetics shed light on these complex interactions with novel approaches incorporating genetic perspectives including genetic variation and phenotypic plasticity in plant defenses against herbivores Finally recent studies on speciation processes in insects are described processes that are related to the evolution of particular life history strategies Included is an examination of two hypotheses that may be important in understanding diversification of insect species in heterogeneous environments in space and time This book is a valuable resource especially for ecologists who are interested in species diversity and community structure
