roads These parameters are represented here as fuzzy triangular trapezoidal numbers and intervals The second problem concerns static and dynamic flow finding in networks under fuzzy conditions and an effective method that takes into account the network's transit parameters is presented here All in all the book provides readers with a practical reference guide to state of the art fuzzy methods for solving flow tasks and offers a valuable resource for all researchers and postgraduate students in the fields of network theory fuzzy models and decision making

Trade, Networks and Hierarchies Geoffrey J.D. Hewings, Michael Sonis, David Boyce, 2013-04-18 In 1989 after several years of discussion and negotiation the Regional Economics Applications Laboratory REAL was formed This unique relationship between the Federal Reserve Bank of Chicago and the University of Illinois at Urbana Champaign has been a significant source of intellectual inspiration for many students visiting colleagues and members of the participating institutions for the past decade The idea for REAL was hatched by Philip Israilevich and Geoffrey Hewings in typical Chicago style in the back room of a local bar In early December 1997 their collaboration came to an untimely end when Philip died after a three year battle with cancer The challenge of moving across a spectrum from theory to model development to implementation and interpretation provided the underlying motivation for REAL's formation together with an equally important component namely the translation of many of these efforts into a form that could be understood and implemented by policy makers For Philip REAL and the Regional Science Association International provided the forums for his intellectual endeavors although he also contributed many papers in banking In recognition of his contributions and to provide a sense of the current research in the fields in which he published many of the authors of these chapters assembled in Chicago in November 1998 to participate in a small seminar in his honor Several others who were not able to come nevertheless contributed chapters to this volume Subsequently all of the papers have been revised and updated

Centrality in Strategic Transportation Network Design Anne Lange, 2019-03-01 Efficient and effective transportation networks are backbones to modern societies Methodologically their design has mainly been driven by optimization approaches oftentimes with a strong cost focus Their strategic planning however should go beyond detailed cost analysis and identify other key decision drivers Transportation network centrality describes the appearance of a network hence is crucial for network design Anne Paul develops a strategic approach to transportation network design by conceptualizing transportation network centrality and relating it to the performance and quality of transportation networks Consequently the concept of network centrality serves to support decisions in strategic network design A practical implementation of this approach is provided demonstrating its feasibility Potential readers include scholars and practitioners from logistics supply chain management and operational research with an interest in strategic transportation network design
