Laboratory Exercises in Anatomy and Physiology (Classic Reprint) James Edward Peabody, 2017-10-13 Excerpt from *Laboratory Exercises in Anatomy and Physiology* Since physiology precedes physics and chemistry in the ordinary high school courses of study it is necessary to give the pupil a few ideas of the fundamental principles of these subjects It seems wise to discuss oxidation and its products more or less thoroughly and to dwell upon osmosis atmospheric pressure and the properties of acids and alkalis The structure and physiology of the organs of special sense eye ear as well as the thorough consideration of levers should be omitted in my judgment until after a course in physics has been taken It is not expected that all of the following experiments will be performed in the limited time usually assigned in the curriculum to this Subject The exercises are however sufficiently varied to allow a wide range of choice The laboratory work on a given topic should if possible be given before the study of that topic in the text book About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may

be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
