The Ethics of Metropolitan Growth Robert Kirkman,2010-04-29 Issues related to metropolitan growth and environmental change are at the heart of public debate today this book explores the ethical implications behind this hugely

topical contemporary debate **Ethics and the Built Environment** Natalie Morgan, 2010 **Ethics and the Built Environment** Warwick Fox, 2012-10-12 Much has been written in recent years on environmental ethics relating to the more general natural environment but little specifically written about ethics of the built environment Ethics and the Built Environment responds to this need and offers a debate on the ethical dimension of building in all its forms from a variety of disciplinary perspectives and approaches This book should be of interest to architects students of building and building design environmentalists politicians and general readers with an interest in ethics Ethics and Politics of the Built Environment Marcello Di Paola, 2018-01-09 This book proposes and defends the practice of urban gardening as an ecologically and socially beneficial culturally innovative morally appropriate ethically uplifting and politically incisive way for individuals and variously networked collectives to contribute to a successful management of some defining challenges of the Anthropocene this new epoch in which no earthly place form entity process or system escapes the reach of human activity including urban resilience and climate change **Technology, Ethics and the Built Environment** Ayyub Malik, 1995

Prospects for an Ethics of Architecture William M. Taylor, Michael P. Levine, 2012-12-06 Bringing together the reflections of an architectural theorist and a philosopher this book encourages philosophers and architects scholars and designers alike to reconsider what they do as well as what they can do in the face of challenging times It does so by exploring the notion that architecture and design can and possibly should in their own right make for a distinctive form of ethical investigation The book is less concerned with absolutist understandings of the two components of ethics a theory of the good and a theory of the right than with remaining open to multiple relations between ideas about the built environment design practices and the plurality of kinds of human subjects inhabitants individuals and communities accommodated by buildings and urban spaces The built environment contributes to the inculcation of all sorts of values good and bad Thus this book aims to change the way people commonly think about ethics not only in relation to the built environment but to themselves their ways of thinking and modes of behaviour Everything is Design: The Hidden Ethics of Our Objects and Public Spaces Alan J. Reid, 2025-05-06 Ethics to put it concisely is mindful well being It is a set of standards that guides how we treat ourselves one another and the environment When we design things for public use we also communicate an ethical perspective When we use things designed for us we adopt their ethics This book synthesizes several different disciplines as they relate to design ethics and the built environment Our objects according to philosophers like Ihde Verbeek and Latour mediate our experiences with the world around us Through their designs and by extension our perceived affordances we largely comply with what our objects and spaces want us to do At the micro level the phones in our pockets command our attentive processes in order to feed an attention economy At the macro level urban planning and infrastructure can both promote inclusivity and foment violence We are deeply intertwined with the objects and spaces that have been designed for us Baked into every object process system and environment are the remnants of the designer's morals ethics values and biases Importantly this book

seeks to cultivate mindfulness of the reader's interactions with their surrounding world providing them with a line of inquiry that questions areas of unethical design in their built environment and offers useful critiques and new solutions to these ethical dilemmas We often have the power to reject those things that are irresponsibly designed and unethical in nature and it is through this agency as users that we can demand better from designers developers and companies It is imperative to understand our mediated relationships with the built environment that surrounds us and the objects within it this can help explain our behaviors and empower us to make ethical decisions that serve future generations

Architecture and Its Ethical Dilemmas Nicholas Ray, 2007-05-07 Ethical issues both practical and philosophical are constantly arising in architectural work This volume relates a broad range of theoretical questions to dilemmas encountered in practice informed by contributions from many different disciplines

Wealth and the Built Environment Emilio José García, Brenda Vale, 2025-04-26 The need to address global environmental problems is urgent The United Nations 17 Sustainable Development Goals SDGs cover a wide range of global concerns from poverty hunger and gender equity to justice and climate action Concerningly the SDGs still have faith in economic growth and technological innovation as the means of fixing all global concerns including climate change What is not questioned is whether solving development and sustainability problems through economic growth for the accumulation of wealth for the few has led to many of the current unequal development and environmental problems If unfair growth and wealth accumulation have been part of the problem how can they be part of the solution The problem with the SDGs is that their fulfilment relies on wealth creation without the fundamental concomitant of wealth redistribution The one common driver of change affecting both sustainability and development that has not been included in the SDGs is wealth the central focus of this book SDG 11 sustainable cities and communities presents a further paradox unless the issue of wealth and its fair distribution is grasped Cities are the places where wealth is generated but are also places where only a minority are wealthy The wealth generated in cities leads to higher consumption of resources higher emissions and higher disparities and inequalities However any version of a sustainable future will happen in the built environment made according to current ideals like the present belief in overcoming all humanity's problems by becoming wealthier A fundamental assumption of this book is that the first step toward a fairer habitat that can be maintained with the resources available is only possible if we stop designing cities and buildings as if everyone were wealthy or had to become wealthy To achieve this goal it is essential to identify and raise awareness of the impact of wealth to question how the myths about the advantages of wealth were built where they come from what shape they take in the built environment and who benefits from them

Architecture as the Ethics of Climate Jin Baek, 2016-06-10 At a time when climate and ethics have become so important to architectural debate this book proposes an entirely new way for architects to engage with these core issues Drawing on Tetsuro Watsuji's 1889-1960 philosophy the book illuminates climate not as a collection of objective natural phenomena but as a concrete form of bond in which who we

are the subjective human experience is indivisibly intertwined with the natural phenomena The book further elucidates the inter personal nature of climatic experiences criticizing a view that sees atmospheric effects of climate under the guise of personal experientialism and reinforcing the linkage between climate and ethos as the appropriateness of a setting for human affairs This ethical premise of climate stretches the horizon of sustainability as pertaining not only to man s solitary relationship with natural phenomena a predominant trend in contemporary discourse of sustainability but also to man s relationship with man Overcoming climatic determinism regional determinism too and expanding the ethics of the inter personal to the level where the whole and particulars are joined through the dialectics of the mutually negating opposites Jin Baek develops a new thesis engaging with the very urgent issues inherent in sustainable architecture Crucially the book explores examples that join climate and the dynamics of the inter personal including Japanese vernacular residential architecture the white residential architecture of Richard Neutra contemporary architectural works and urban artifacts by Tadao Ando and Aldo Rossi Beautifully illustrated this book is an important contribution to the discourse which surrounds architecture climate and ethics and encourages the reader to think more broadly about how to respond to the current challenges facing the profession

Design and Ethics Emma Felton,Oksana Zelenko,Suzi Vaughan,2013-06-19 The value of design for contributing to environmental solutions and a sustainable future is increasingly recognised It spans many spheres of everyday life and the ethical dimension of design practice that considers environmental social and economic sustainability is compelling Approaches to design recognise design as a practice that can transform human experience and understanding expanding its role beyond stylistic enhancement The traditional roles of design designer and designed object are therefore redefined through new understanding of the relationship between the material and immaterial aspects of design where the design product and the design process are embodiments of ideas values and beliefs This multi disciplinary approach considers how to create design which is at once aesthetically pleasing and also ethically considered with contributions from fields as diverse as architecture fashion urban design and philosophy The authors also address how to teach design based subjects while instilling a desire in the student to develop ethical work practices both inside and outside the studio

Professionalism for the Built Environment Simon Foxell,2018-09-03 In the aftermath of the Grenfell Tower tragedy this new book provides thought provoking commentary on the nature of the relationship between society the prevailing economic system and professionalism in the built environment It addresses the changing responsibilities of professionals and in particular their obligation to act in the wider public interest It is both an introduction to and an examination of professionalism and professional bodies in the sector including a view of the future of professionalism and the organisations serving it Simon Foxell outlines the history of professionalism in the sector comparing and contrasting the development of the three major historic professions working in the construction industry civil engineering architecture and surveying He examines how their systems have developed over time up to the current period dominated by large professional

services firms and looks at some options for the future whilst asking difficult questions about ethics training education public trust and expectation from within and outside the industry The book concludes with a six point plan to help if not ensure that the professions remain an effective and essential part of both society and the economy a part that allows the system to operate smoothly and easily but also fairly and to the benefit of all Essential reading for built environment professionals and students doing the professional studies elements of their training or in the process of applying for chartership or registration The issues and lessons are applicable across all building professions
