**Operations Research and**

**Health Care Policy** Gregory S. Zaric, 2013-03-27 Operations research tools are ideally suited to providing solutions and insights for the many problems health policy makers face. Indeed, a growing body of literature on health policy analysis based on operations research methods has emerged to address the problems mentioned above and several others. The research in this field is often multi-disciplinary, being conducted by teams that include not only operations researchers but also clinicians, economists, and policy analysts. The research is also often very applied, focusing on a specific question driven by a decision maker and many times yielding a tool to assist in future decisions. The goal of this volume was to bring together a group of papers by leading experts that could showcase the current state of the field of operations research applied to health care policy. There are 18 chapters that illustrate the breadth of this field. The chapters use a variety of techniques including classical operations research tools such as optimization, queueing theory, and discrete event simulation, as well as statistics, epidemic models, and decision analytic models. The book spans the field and includes work that ranges from highly conceptual to highly applied. An example of the former is the chapter by Kimmel and Schackman on building policy models, and an example of the latter is the chapter by Coyle and colleagues on developing a Markov model for use by an organization in Ontario that makes recommendations about the funding of new drugs. The book also includes a mix of review chapters such as the chapter by Hutton on public health response to influenza outbreaks and original research such as the paper by Blake and colleagues analyzing a decision by Canadian Blood Services to consolidate services. This volume could provide an excellent introduction to the field of operations research applied to health care policy and it could also serve as an introduction to new areas for researchers already familiar with the topic. The book is divided into six sections. The first section contains two chapters that describe several different applications of operations research in health policy and provide an excellent overview of the field. Sections 2 to 4 present policy models in three focused areas. Section 5 contains two chapters on conceptualizing and building policy models. The book concludes in Section 6 with two chapters describing work that was done with policy makers and presenting insights gained from working directly with policy makers. Decolonial Aesthetics II

Patrick Oloko, Michaela Ott, Peter Simatei, Clarissa Vierke, 2023-06-27 This book features writing by 17 authors from Germany and from African and Latin American countries on highly diverse aesthetic phenomena as seen from their own different points of view. The texts in this volume all deal with the imperative of decolonization; they try to highlight aesthetic strategies for the re-discovery of unthematized, misappropriated, transcultural, and even transcontinental histories and memories and aesthetic practices that are absent from or too little perceived within national consciousnesses. Novels, poems, and musical performances from the East African region are analysed as intertwined histories of the Indian Ocean and its different languages. Artworks of the Black Atlantic and perceptions of Africa are discussed from, for example, Brazilian perspectives. Within the German context, decolonisation strategies in exhibition practices in ethnological or art museums developed by Nigerian artists are evaluated. New terms such as *dividuation* are proposed to describe these contemporary composite
