*Building the Foundation: Whole Numbers in the Primary Grades* Maria G. Bartolini Bussi, Xu Hua Sun, 2018-03-29 This twenty third ICMI Study addresses for the first time mathematics teaching and learning in the primary school and pre school setting while also taking international perspectives socio cultural diversity and institutional constraints into account One of the main challenges of designing the first ICMI primary school study of this kind is the complex nature of mathematics at the early level Accordingly a focus area that is central to the discussion was chosen together with a number of related questions The broad area of Whole Number Arithmetic WNA including operations and relations and arithmetic word problems forms the core content of all primary mathematics curricula The study of this core content area is often regarded as foundational for later mathematics learning However the principles and main goals of instruction on the foundational concepts and skills in WNA are far from universally agreed upon and practice varies substantially from country to country As such this study presents a meta level analysis and synthesis of what is currently known about WNA providing a useful base from which to gauge gaps and shortcomings as well as an opportunity to learn from the practices of different countries and contexts

*Mathematisation and Demathematisation*, 2007-01-01 In this volume scholars from diverse strands of research have contributed their perspectives on a process of mathematisation which renders social economical or political relationships increasingly formal At the same time mathematical skills lose their importance as they become replaced by diverse technological tools a process of demathematisation takes place The computerization of financial transactions calculation of taxes and fees comparison of prices as well as orientation by means of GPS visualisation of complex data and electronic voting systems all these

mathematical technologies increasingly penetrate the lifestyle of consumers What are the perils and promises of this development Who is in charge who is affected who is excluded A common concern of all the authors of this volume is an attempt to draw attention to issues related to the formatting power of mathematics and to its role as implicit knowledge which results in a process of demathematisation This process having once received considerable attention is now threatened to be eclipsed by the proliferation of a discussion of school mathematics which shows a tendency of cutting off its own philosophical and political roots Taken together the contributions reveal a rather complex picture They draw attention to the importance of clarifying epistemological societal and ideological issues as a prerequisite for a discussion of curriculum

Technologies in a Multilingual Environment Daria Bylieva, Alfred Nordmann, 2023-02-18 The book addresses the challenge of living in a multilingual world from three perspectives socio linguistics and the study of multilingualism in contrast philosophy of technology with its emphasis on the world as a technosphere how it is made how it is experienced and how it can be managed and then pedagogy and the question of teaching and learning to competently negotiate multilingual environments In today s multicultural and multilingual world technologies provide a common ground The story of the technosphere as a multilingual environment offers new perspective namely that of learning to cooperate and coordinate
