Euler Systems Annals Of Mathematics:

Automorphic Forms and Galois Representations: Volume 1 Fred Diamond, Payman L. Kassaei, Minhyong Kim, 2014-10-16 Automorphic forms and Galois representations have played a central role in the development of modern number theory with the former coming to prominence via the celebrated Langlands program and Wiles proof of Fermat's Last Theorem This two volume collection arose from the 94th LMS EPSRC Durham Symposium on Automorphic Forms and Galois Representations in July 2011 the aim of which was to explore recent developments in this area The expository articles and research papers across the two volumes reflect recent interest in p adic methods in number theory and representation theory as well as recent progress on topics from anabelian geometry to p adic Hodge theory and the Langlands program The topics covered in volume one include the Shafarevich Conjecture effective local Langlands correspondence p adic L functions the fundamental lemma and other topics of contemporary interest Stark's Conjectures: Recent Work and New Directions David Burns, 2004 Heegner Modules and Elliptic Curves Martin L. Brown, 2004-08-30 Heegner points on both modular curves and elliptic curves over global fields of any characteristic form the topic of this research monograph The Heegner module of an elliptic curve is an original concept introduced in this text The computation of the cohomology of the Heegner module is the main technical result and is applied to prove the Tate conjecture for a class of elliptic surfaces over finite fields this conjecture is equivalent to the Birch and Swinnerton Dyer conjecture for the corresponding elliptic curves over global fields **Arithmetic of L-functions** Cristian Popescu, Karl Rubin, Alice Silverberg, Automorphic Forms and Galois Representations Fred Diamond, Payman L. Kassaei, Minhyong Kim, 2014-10-16 Part one of a two volume collection exploring recent developments in number theory related to automorphic forms and Galois representations Annals of Mathematics Studies Karl Rubin, 1940 *Iwasawa Theory 2012* Thanasis Bouganis, Otmar Venjakob, 2014-12-08 This is the fifth conference in a bi annual series following conferences in Besancon Limoges Irsee and Toronto The meeting aims to bring together different strands of research in and closely related to the area of Iwasawa theory During the week before the conference in a kind of summer school a series of preparatory lectures for young mathematicians was provided as an introduction to Iwasawa theory Iwasawa theory is a modern and powerful branch of number theory and can be traced back to the Japanese mathematician Kenkichi Iwasawa who introduced the systematic study of \mathbb{Z}_p extensions and p adic L functions concentrating on the case of ideal class groups Later this would be generalized to elliptic curves Over the last few decades considerable progress has been made in automorphic Iwasawa theory e g the proof of the Main Conjecture for GL_2 by Kato and Skinner Urban Techniques such as Hida's theory of p adic modular forms and big Galois representations play a crucial part Also a noncommutative Iwasawa theory of arbitrary p adic Lie extensions has been developed This volume aims to present a snapshot of the state of art of Iwasawa theory as of 2012 In particular it offers an introduction to Iwasawa theory based on a preparatory course by Chris Wuthrich and a survey of the proof of Skinner Urban based on a lecture course by

Xin Wan **Elliptic Curves, Modular Forms and Iwasawa Theory** David Loeffler, Sarah Livia Zerbes, 2017-01-15 Celebrating one of the leading figures in contemporary number theory John H Coates on the occasion of his 70th birthday this collection of contributions covers a range of topics in number theory concentrating on the arithmetic of elliptic curves modular forms and Galois representations Several of the contributions in this volume were presented at the conference Elliptic Curves Modular Forms and Iwasawa Theory held in honour of the 70th birthday of John Coates in Cambridge March 25 27 2015 The main unifying theme is Iwasawa theory a field that John Coates himself has done much to create This collection is indispensable reading for researchers in Iwasawa theory and is interesting and valuable for those in many related fields

Shafarevich-Tate Groups M.L. Brown, 2025-03-13 This monograph explores the finiteness and structure of Shafarevich Tate groups of abelian varieties over global fields of any characteristic Readers will better understand how the methods of Euler systems and Kolyvagin systems can be adapted to Heegner points and CM points Also offered is a comprehensive overview of the most important classical and recent results on these objects Shafarevich Tate Groups will be a valuable resource to those interested in this active area of research

Cyclotomic Fields and Zeta Values John Coates, R. Sujatha, 2006-10-03 Cyclotomic fields have always occupied a central place in number theory and the so called main conjecture on cyclotomic fields is arguably the deepest and most beautiful theorem known about them It is also the simplest example of a vast array of subsequent unproven main conjectures in modern arithmetic geometry involving the arithmetic behaviour of motives over p adic Lie extensions of number fields These main conjectures are concerned with what one might loosely call the exact formulae of number theory which conjecturally link the special values of zeta and L functions to purely arithmetic expressions Written by two leading workers in the field this short and elegant book presents in full detail the simplest proof of the main conjecture for cyclotomic fields Its motivation stems not only from the inherent beauty of the subject but also from the wider arithmetic interest of these questions The masterly exposition is intended to be accessible to both graduate students and non experts in Iwasawa theory

Canadian Journal of Mathematics, 1994-04 [P-adic Aspects Of Modular Forms](#) Baskar Balasubramanyam, A Raghuram, Jacques Tilouine, Haruzo Hida, 2016-06-14 The aim of this book is to give a systematic exposition of results in some important cases where p adic families and p adic L functions are studied We first look at p adic families in the following cases general linear groups symplectic groups and definite unitary groups We also look at applications of this theory to modularity lifting problems We finally consider p adic L functions for GL_2 the p adic adjoint L functions and some cases of higher GL_n

Iwasawa Theory and Its Perspective, Volume 2 Tadashi Ochiai, 2024-04-25 Iwasawa theory began in the late 1950s with a series of papers by Kenkichi Iwasawa on ideal class groups in the cyclotomic tower of number fields and their relation to p adic L functions The theory was later generalized by putting it in the context of elliptic curves and modular forms The main motivation for writing this book was the need for a total perspective of Iwasawa theory that includes the new trends of generalized Iwasawa theory Another

motivation is to update the classical theory for class groups taking into account the changed point of view on Iwasawa theory The goal of this second part of the three part publication is to explain various aspects of the cyclotomic Iwasawa theory of p adic Galois representations **Annals of Mathematics** ,1904 Founded in 1884 Annals of Mathematics publishes research papers in pure mathematics Canadian Journal of Mathematics ,1994-04 Canadian Journal of Mathematics ,1994-04

Canadian Journal of Mathematics ,1994-04 **Iwasawa Theory and Its Perspective, Volume 3** Tadashi Ochiai,2025-06-13 Iwasawa theory began in the late 1950s with a series of papers by Kenkichi Iwasawa on ideal class groups in the cyclotomic tower of number fields and their relation to p adic L functions The theory was later generalized by putting it in the context of elliptic curves and modular forms The main motivation for writing this book was the need for a total perspective of Iwasawa theory that includes the new trends of generalized Iwasawa theory Another motivation is to update the classical theory for class groups taking into account the changed point of view on Iwasawa theory The goal of this third part of the three part publication is to present additional aspects of the Iwasawa theory of p adic Galois deformations The Computational and Theoretical Aspects of Elliptic Curves Zhibin Liang,Chandrakant Aribam,2019-05-22 This volume presents a collection of results related to the BSD conjecture based on the first two India China conferences on this topic It provides an overview of the conjecture and a few special cases where the conjecture is proved The broad theme of the two conferences was Theoretical and Computational Aspects of the Birch and Swinnerton Dyer Conjecture The first was held at Beijing International Centre for Mathematical Research BICMR in December 2014 and the second was held at the International Centre for Theoretical Sciences ICTS Bangalore India in December 2016 Providing a broad overview of the subject the book is a valuable resource for young researchers wishing to work in this area The articles have an extensive list of references to enable diligent researchers to gain an idea of the current state of art on this conjecture **Statistical Mechanics** Giovanni Gallavotti,2013-11-11 This clear book presents a critical and modern analysis of the conceptual foundations of statistical mechanics as laid down in Boltzmann s works The author emphasises the relation between microscopic reversibility and macroscopic irreversibility explaining fundamental concepts in detail
