Campbell, 2005-01-11 One of the most profound philosophical problems is the nature of mind and its relationship to the body. *A Brief Introduction to the Philosophy of Mind* provides an introduction written in clear language to the various theories of the mind-body relationship as well as a host of related philosophical discussions about mind and consciousness. The central theories such as Cartesian Dualism, parallelism, epiphenomenalism, and supervenience among others are presented in historical order. Their claims, their strengths and weaknesses, and how they ultimately relate to one another and to other philosophical questions are explored objectively, allowing readers to decide for themselves which theories are best.

Chance, Merit, and Economic Inequality Joseph de la Torre Dwyer, 2019-09-11 This book develops a novel approach to distributive justice by building a theory based on a concept of desert. As a work of applied political theory, it presents a simple but powerful theoretical argument and a detailed proposal to eliminate unmerited inequality, poverty, and economic immobility, speaking to the underlying moral principles of both progressives who already support egalitarian measures and also conservatives who have previously rejected egalitarianism on the grounds of individual freedom, personal responsibility, hard work, or economic efficiency. By using an agnostic, flexible, data-driven approach to isolate luck and ultimately measure desert, this proposal makes equal opportunity initiatives both more accurate and effective as it adapts to a changing economy. It grants to each individual the freedom to genuinely choose their place in the distribution. It provides two policy variations that are perfectly economically efficient and two others that are conditionally so. It straightforwardly aligns outcomes with widely shared fundamental moral intuitions. Lastly, it demonstrates much of the above by modeling four policy variations using 40 years of survey data from the Panel Study of Income Dynamics. **First Philosophy III: God, Mind, and**

Mental Causation Neil Campbell, 2008 How do mental events such as choices and decisions lead to physical action The problem of mental causation is one of the most important and intriguing philosophical issues of our time and has been at the centre of debates in the philosophy of mind for the past fifty years In opposition to the recent wave of reductionist theories this book argues that it is possible to account for mental causation within a nonreductive framework as it adopts a broadly Davidsonian approach to mental causation reasons cause actions because they are identical to physical events This work then defends this approach from the frequently raised criticism that it entails epiphenomenalism the inefficacy of the mental Moreover Mental Causation moves beyond Davidson s views by reconsidering the question of whether reasons causally explain actions arguing in opposition to Davidson that explanations appealing to reasons represent a distinct category of explanation from causal explanation Essential reading for anyone interested in debates about mental causation this is an excellent text for senior undergraduates graduate students and professional philosophers

Douglass, 2015-06-03 The subject of this book is the controversy one of the oldest in philosophy about whether it is possible to have freedom in the face of universal causal determinism Of course it is crucial to consider what such freedom might mean in particular there is an important distinction between libertarian free will and the more naturalistic view of freedom taken by compatibilists This book provides background for laypersons through a historical survey of earlier views and some discussion and criticism of various contemporary views In particular it states and discusses the Consequence Argument the most important argument challenging human freedom in recent literature The main feature of the book is the argument for a solution one that is within the compatibilist tradition is naturalistic and in accord with findings of science and principles of engineering control theory Some particular features of the offered solution include an argument for a close tie between freedom and control where what is meant is the voluntary motion control of our bodies and this control is understood naturalistically by which the author means in accordance with concepts of engineering control theory and modern science Such concepts are used to explain and demarcate the concept of control being used Then it develops a working conception of what rationality is since what is crucial is freedom in choice and rationality is crucial to that by reviewing texts on the subject by three expert authors namely Nathanson Nozick and Searle It is argued that rationality is a species of biological learning control that involves deliberation and that our freedom in choice is greatest when our choices are most rational First Philosophy Andrew Bailey, 2002-08-01 This introductory anthology brings together forty eight readings on eight topics central to philosophy Mindful of the intrinsic difficulty of much of the material the editor has provided comprehensive introductions both to the eight topics and to each
