Free and Guided Optical Beams S. Martellucci, Massimo Santarsiero, 2004 Optical beams

are electromagnetic waves that remain essentially concentrated around a mean axis upon free propagation or that are guided by suitable structures. The study of these beams has existed long ago and since then this field has been a focus of active investigation. However, in recent years the interest on optical beams has further increased due to the availability of many types of laser sources characterized by very different properties as far as their polarization, coherence, spectral content and spatial distribution are concerned. This book contains lectures presented in the 35th International School of Quantum Electronics at the Ettore Majorana Centre in Erice, Sicily. It gives the latest coverage on the development and advance in Free and Guided Optical Beams. The purpose of these lectures was to give an updated overview as complete as possible on topics concerning the propagation of light beams in free space, in materials and in guiding structures and to provide the tools needed to its study both from the theoretical and the application point of view. The lectures presented here are written in extended review like format. Both introductory fundamental topics and recent research results are reviewed, making this an indispensable book for novice as well as experts in this field. The proceedings have been selected for coverage in OCo Index to Scientific Technical Proceedings, ISTP, ISI Proceedings, OCo Index to Scientific Technical Proceedings, ISTP CDROM version, ISI Proceedings, OCo CC Proceedings, OCo Engineering Physical Sciences. *Free-Space Laser Communications* Arun K. Majumdar, Jennifer C. Ricklin, 2010-05-05. Free space laser communications, also referred to as optical communications, is a popular subject in today's technological marketplace. A number of conferences on this subject have been organized by professional societies such as SPIE, the International Society of Photo Optical and Instrumentation Engineering, OSA, Optical Society of America and IEEE Institute of Electrical and Electronics Engineers. The evolving technology of free space laser communications is emerging as an appealing alternative to RF communications for links between satellites as well as a promising addition to terrestrial applications such as video or computer linkups between buildings. There is a pressing need for more information on laser communications that is comprehensive enough to provide in depth knowledge of free space communications and that can satisfy the current demands of the research and commercial needs. This book has been designed to provide a comprehensive unified tutorial to further understanding of the fundamental techniques for laser communications through the earth's atmosphere. The driving force behind free space laser communications is the continuous demand for higher bandwidth to deliver high capacity voice, data and images to the customer. Free space propagation distances include ranges that encompass a few millimeters for example between optical interconnects in a computer using photonics to replace metal interconnects, a few meters such as indoor communications, a few kilometers between buildings, campuses and hospitals and even up to thousands of kilometers such as from an aircraft or satellite to the ground.
