Methods of Spectral Representations of Non-Selfadjoint (Non-Unitary) Operators Vladimir A. Zolotarev, 2025-05-03

This book is concerned with the theory of model representations of linear non selfadjoint and non unitary operators This booming area of functional analysis owes its origins to the fundamental works of M S Liv ic on the theory of characteristic functions the deep studies of B S Nagy and C Foias on dilation theory and also to the Lax Phillips scattering theory Here a uniform conceptual approach is developed which organically unites all these theories New analytic methods are introduced which make it possible to solve some important problems from the theory of spectral representations Aimed at specialists in functional analysis the book will also be accessible to senior mathematics students **Analysis on Fock Spaces** Kehe

Zhu, 2012-05-26 Several natural L_p spaces of analytic functions have been widely studied in the past few decades including Hardy spaces Bergman spaces and Fock spaces The terms Hardy spaces and Bergman spaces are by now standard and well established But the term Fock spaces is a different story Numerous excellent books now exist on the subject of Hardy spaces Several books about Bergman spaces including some of the author s have also appeared in the past few decades But there has been no book on the market concerning the Fock spaces The purpose of this book is to fill that void especially when many results in the subject are complete by now This book presents important results and techniques summarized in one place so that new comers especially graduate students have a convenient reference to the subject This book contains proofs that are new and simpler than the existing ones in the literature In particular the book avoids the use of the Heisenberg group the Fourier transform and the heat equation This helps to keep the prerequisites to a minimum A standard graduate course in each of real analysis complex analysis and functional analysis should be sufficient preparation for the reader Topics in

Operator Theory Systems and Networks Dym, Gohberg, 2013-11-22 This volume contains the proceedings of the Workshop on applications of linear operator theory to systems and networks which was held at the Weizmann Institute of Science in the third week of June 1983 just before the MTNS Conference in Beersheva For a long time these subjects were studied independently by mathematical analysts and electrical engineers Nevertheless in spite of the lack of communication these two groups often developed parallel theories though in different languages at different levels of generality and typically quite different motivations In the last several years each side has become aware of the work of the other and there is a seemingly ever increasing involvement of the abstract theories of factorization extension and interpolation of operators and operator matrix valued functions to the design and analysis of systems and networks Moreover the problems encountered in electrical engineering have generated new mathematical problems new approaches and useful new formulations The papers contained in this volume constitute a more than representative selection of the presented talks and

discussion at the workshop and hopefully will also serve to give a reasonably accurate picture of the problems which are under active study today and the techniques which are used to deal with them

Hyperbolic Manifolds And Holomorphic Mappings: An Introduction (Second Edition)
Shoshichi Kobayashi, 2005-11-02 The first edition of this influential book published in 1970 opened up a completely new field of invariant metrics and hyperbolic manifolds The large number of papers on the topics covered by the book written since its appearance led Mathematical Reviews to create two new subsections invariant metrics and pseudo distances and hyperbolic complex manifolds within the section holomorphic mappings The invariant distance introduced in the first edition is now called the Kobayashi distance and the hyperbolicity in the sense of this book is called the Kobayashi hyperbolicity to distinguish it from other hyperbolicities This book continues to serve as the best introduction to hyperbolic complex analysis and geometry and is easily accessible to students since very little is assumed The new edition adds comments on the most recent developments in the field

Indefinite Inner Product Spaces, Schur Analysis, and Differential Equations

Daniel Alpay, Bernd Kirstein, 2018-01-30 This volume which is dedicated to Heinz Langer includes biographical material and carefully selected papers Heinz Langer has made fundamental contributions to operator theory In particular he has studied the domains of operator pencils and nonlinear eigenvalue problems the theory of indefinite inner product spaces operator theory in Pontryagin and Krein spaces and applications to mathematical physics His works include studies on and applications of Schur analysis in the indefinite setting where the factorization theorems put forward by Krein and Langer for generalized Schur functions and by Dijksma Langer Luger Shondin play a key role The contributions in this volume reflect Heinz Langer's chief research interests and will appeal to a broad readership whose work involves operator theory

Linear Holomorphic Partial Differential Equations and Classical Potential Theory Dmitry Khavinson, Erik Lundberg, 2018-07-09 Why do solutions of linear analytic PDE suddenly break down What is the source of these mysterious singularities and how do they propagate Is there a mean value property for harmonic functions in ellipsoids similar to that for balls Is there a reflection principle for harmonic functions in higher dimensions similar to the Schwarz reflection principle in the plane How far outside of their natural domains can solutions of the Dirichlet problem be extended Where do the continued solutions become singular and why This book invites graduate students and young analysts to explore these and many other intriguing questions that lead to beautiful results illustrating a nice interplay between parts of modern analysis and themes in physical mathematics of the nineteenth century To make the book accessible to a wide audience including students the authors do not assume expertise in the theory of holomorphic PDE and most of the book is accessible to anyone familiar with multivariable calculus and some basics in complex analysis and differential equations

Recent Advances in Operator Theory and Its Applications Marinus A. Kaashoek, Sebastiano Seatzu, Cornelis van der Mee, 2006-01-17 This book contains a selection of carefully refereed research papers most of which were presented at the fourteenth International Workshop on Operator

Theory and its Applications IWOTA held at Cagliari Italy from June 24-27 2003 The papers many of which have been written by leading experts in the field concern a wide variety of topics in modern operator theory and applications with emphasis on differential operators and numerical methods The book will be of interest to a wide audience of pure and applied

mathematicians and engineers **Functions of Completely Regular Growth** L.I. Ronkin, 2012-12-06 This monograph deals with functions of completely regular growth FCRG i.e. functions that have in some sense good asymptotic behaviour out of an exceptional set The theory of entire functions of completely regular growth of one variable developed in the late 1930s soon found applications in both mathematics and physics Later the theory was extended to functions in the half plane subharmonic functions in space and entire functions of several variables This volume describes this theory and presents recent developments based on the concept of weak convergence This enables a unified approach and provides a comparatively simple presentation of the classical Levin-Pfluger theory Emphasis is put on those classes of functions which are particularly important for applications functions having a bounded spectrum and finite exponential sums For research mathematicians and physicists whose work involves complex analysis and its applications The book will also be useful to those working in some areas of radiophysics and optics Several Complex Variables III G.M. Khenkin, 2012-12-06 We

consider the basic problems notions and facts in the theory of entire functions of several variables i.e. functions $J(z)$ holomorphic in the entire n space 1 the zero set of an entire function is not discrete and therefore one has no analogue of a tool such as the canonical Weierstrass product which is fundamental in the case $n=1$ Second for $n \geq 1$ there exist several different natural ways of exhausting the space **A Panorama of Modern Operator Theory and Related Topics** Harry

Dym, Marinus A. Kaashoek, Peter Lancaster, Heinz Langer, Leonid Lerer, 2012-02-01 This book is dedicated to the memory of Israel Gohberg 1928-2009 one of the great mathematicians of our time who inspired innumerable fellow mathematicians and directed many students The volume reflects the wide spectrum of Gohberg's mathematical interests It consists of more than 25 invited and peer reviewed original research papers written by his former students co-authors and friends Included are contributions to single and multivariable operator theory commutative and non commutative Banach algebra theory the theory of matrix polynomials and analytic vector valued functions several variable complex function theory and the theory of structured matrices and operators Also treated are canonical differential systems interpolation completion and extension problems numerical linear algebra and mathematical systems theory Probability, Geometry and Integrable Systems Mark Pinsky, Bjorn Birnir, 2008-03-17 Reflects the range of mathematical interests of Henry McKean to whom it is dedicated

Advances in Complex Analysis and Operator Theory Fabrizio Colombo, Irene Sabadini, Daniele C. Struppa, Mihaela B. Vajiac, 2017-09-30 This book gathers contributions written by Daniel Alpay's friends and collaborators Several of the papers were presented at the International Conference on Complex Analysis and Operator Theory held in honor of Professor Alpay's 60th birthday at Chapman University in November 2016 The main topics covered are complex analysis operator theory and

other areas of mathematics close to Alpay's primary research interests. The book is recommended for mathematicians from the graduate level on working in various areas of mathematical analysis: operator theory, infinite dimensional analysis, linear systems and stochastic processes.

Sharp Real-Part Theorems Gershon Kresin, Vladimir Maz'ya, 2007-03-05. This volume contains a coherent point of view on various sharp pointwise inequalities for analytic functions in a disk in terms of the real part of the function on the boundary circle or in the disk itself. Inequalities of this type are frequently used in the theory of entire functions and in the analytic number theory.

Mittag-Leffler Functions, Related Topics and Applications Rudolf Gorenflo, Anatoly A. Kilbas, Francesco Mainardi, Sergei Rogosin, 2020-10-27. The 2nd edition of this book is essentially an extended version of the 1st and provides a very sound overview of the most important special functions of Fractional Calculus. It has been updated with material from many recent papers and includes several surveys of important results known before the publication of the 1st edition but not covered there. As a result of researchers and scientists increasing interest in pure as well as applied mathematics in non conventional models particularly those using fractional calculus Mittag Leffler functions have caught the interest of the scientific community. Focusing on the theory of Mittag Leffler functions this volume offers a self contained comprehensive treatment ranging from rather elementary matters to the latest research results. In addition to the theory the authors devote some sections of the work to applications treating various situations and processes in viscoelasticity, physics, hydrodynamics, diffusion and wave phenomena as well as stochastics. In particular the Mittag Leffler functions make it possible to describe phenomena in processes that progress or decay too slowly to be represented by classical functions like the exponential function and related special functions. The book is intended for a broad audience comprising graduate students, university instructors and scientists in the field of pure and applied mathematics as well as researchers in applied sciences like mathematical physics, theoretical chemistry, bio mathematics, control theory and several other related areas.

J-Contractive Matrix Valued Functions and Related Topics Damir Z. Arov, Harry

Dym, 2008-11-06. A comprehensive introduction to the theory of J contractive and J inner matrix valued functions with respect to the open upper half plane and a number of applications of this theory. It will be of particular interest to those with an interest in operator theory and matrix analysis.

The Bergman Kernel and Related Topics Kengo Hirachi, Takeo Ohsawa, Shigeharu Takayama, Joe Kamimoto, 2024-03-19. This volume consists of 15 papers contributing to the Hayama Symposium on Complex Analysis in Several Variables XXIII which was dedicated to the 100th anniversary of the creation of the Bergman kernel. The symposium took place in Hayama and Tokyo in July 2022. Each article is closely related to the Bergman kernel covering topics in complex analysis, differential geometry, representation theory, PDE, operator theory and complex algebraic geometry. Specifically some papers address the L^2 extension operators from a newly opened viewpoint after solving Suita's conjecture for the logarithmic capacity. They are also continuations of quantitative solutions to the openness conjecture for the multiplier ideal sheaves. The study involves estimates for the solutions of the $\bar{\partial}$ equations.

focusing on the existence of compact Levi flat hypersurfaces in complex manifolds The collection also reports progress on various topics including the existence of extremal Kähler metrics on compact manifolds L_p variants of the Bergman kernel Wehrli type inequalities homogeneous Kähler metrics on bounded homogeneous domains asymptotics of the Bergman kernels and harmonic Szegő kernels and operators on the Bergman spaces and Segal Bargmann spaces Some of the papers are written in an easily accessible way for beginners Overall this collection updates how a basic notion provides strong insights into the internal relationships between independently found phenomena

Bitangential Direct and Inverse Problems for Systems of Integral and Differential Equations Damir Z. Arov, Harry Dym, 2012-09-13 An essentially self contained treatment ideal for mathematicians physicists or engineers whose research is connected with inverse problems
