**Environmental Sociology** Leslie King, Deborah McCarthy Auriffeille, 2013-07-29 Environmental Sociology encourages students to use the sociological imagination to explore a broad spectrum of issues facing the environment today The third edition of this reader includes an updated introduction and thirteen new pieces that examine how social dimensions particularly power and inequality interact with environmental issues *Environmental Rights* Steve Vanderheiden, 2017-07-05 The essays selected for this volume present critical viewpoints from the debate about the need to establish rights on behalf of greater environmental protection Three main areas for developing environmental rights are surveyed including extensionist theories that link existing rights for example to subsistence or territory to threats of harm from exacerbated resource scarcity pollution or rapid environmental change proposals for rights to specified environmental goods or services such as rights to a safe environment and the capacity to assimilate greenhouse gas emissions and rights

that protect the interests of parties not currently recognized as having rights including nonhuman subjects natural objects and future generations This volume captures the potential for and primary challenges to the development of rights as instruments for safeguarding the planet s life support capacities and features proposals and analyses which argue the need to create an avenue of recourse against ecological degradation whether on behalf of human or nonhuman right holders

*The Context of Environmental Politics* Harold Sprout, Margaret Sprout, 2021-11-21 Now familiar to all is the cry that present rates of pollution ecological disruption and depletion of resources are leading inevitably to worldwide disaster A multitude of immediate needs however compete for the staggering sums required to save the environment and the reduction of consumption which must accompany such expenditures holds little popular appeal The decisions therefore must ultimately be political ones but what choices are governments to make Here is the essence of what Professors Harold and Margaret Sprout term the statesmen s dilemma These noted scholars examine the dilemma in detail exploring a wide range of points of view and developing a reasoned philosophical stance of their own While their account of what is happening to the world and what we are doing about it is a gloomy one it is notable that the authors do not entirely despair of man s future In an epilogue they propose a number of measures which with luck might enable coming generations to inherit a share of the earth s bounty *The Context of Environmental Politics* is the first volume of *The Third Century Series* a group of books exploring the major issues and challenges confronting the United States as it enters its third century [Global Environmental Politics](#)

Ronnie D. Lipschutz, 2003-07-30 Traditional views of global environmental politics take the structures and relations of international politics as a given Solutions to environmental problems then must be products of concession negotiation and inevitable compromise a world of top down planetary management Lipschutz challenges students to question these conventional approaches He argues that much light can be shed on global environmental degradation if we look beyond the politics of conflict and cooperation and explore environmental problems from their very roots Using a framework that accounts for the ontologies material conditions and power relations that structure global environmental problems Lipschutz is able to more effectively question attempts to clean up the globe and sustain the world s natural resources Throughout the text the author uses compelling cases to illustrate the effects of globalization and capitalism yet is careful to make the link between the local and the global to show how we as individuals are both consumers of goods and producers of pollution A powerful new approach How is the financing of a water system in Bolivia linked to long standing forestation practices in India Taking nothing for granted the root causes of major global environmental problems are exposed and subjected to rigorous analysis Lipschutz shows for instance how privatization operates in different global contexts with strikingly similar consequences In what ways are liberalism and realism actually two sides of the same coin Both make self interest of the individual and of the state key operating terms In a revealing comparison Lipschutz explores the limits of these dominant political models to effectively frame and solve environmental problems What kinds of political social and environmental

practices bring about meaningful change By emphasizing the global impacts of local actions the text shows how attempts to control environmental problems may actually reproduce the very systems they are meant to ameliorate Combined with practical pedagogy Rich historical background helps contextualize contemporary issues Extensive suggested reading lists at the end of each chapter guide students to further research while tables and figures elegantly show data and concepts The emphasis on assessing the root causes of global environmental problems and models encourages critical thinking Students are also encouraged to rethink their own role in the global environmental system and to get involved in effective forms of social change

**Global Environment** K. R. Gupta, Maria Anna Jankowska, Prasenjit Maiti, 2007 **Environmental Politics for a Changing World** Ronnie D. Lipschutz, Doreen Stabinsky, 2018-07-12 This book argues that environmental problems are first and foremost political and therefore about power Using a framework of political economy and political ecology the authors deconstruct current environmental problems to identify root causes and address those problems through mobilization of collective action and social power The second edition also offers Updated examples and stories of political struggles and the actors involved Explicit attention to various forms of power in environmental politics including structural and social power Local politics and collective action as related to global environmental politics Discussion of emerging issues such as synthetic biology commodification and financialization of nature including carbon markets and geoengineering
