Sustainability and the U.S. EPA National Research Council, Policy and Global Affairs, Science and Technology for Sustainability Program, Committee on Incorporating Sustainability in the U.S. Environmental Protection Agency, 2011-10-08 Sustainability is based on a simple and long recognized factual premise Everything that humans require for their survival and well being depends directly or indirectly on the natural environment The environment provides the air we breathe the water we drink and the food we eat Recognizing the importance of sustainability to its work the U S Environmental Protection Agency EPA has been working to create programs and applications in a variety of areas to better incorporate sustainability into decision making at the agency To further strengthen the scientific basis for sustainability as it applies to human health and environmental protection the EPA asked the National Research Council NRC to provide a framework for incorporating sustainability into the EPA s principles and decision making This framework Sustainability and the U S EPA provides

recommendations for a sustainability approach that both incorporates and goes beyond an approach based on assessing and managing the risks posed by pollutants that has largely shaped environmental policy since the 1980s. Although risk based methods have led to many successes and remain important tools, the report concludes that they are not adequate to address many of the complex problems that put current and future generations at risk such as depletion of natural resources, climate change and loss of biodiversity. Moreover, sophisticated tools are increasingly available to address cross cutting complex and challenging issues that go beyond risk management. The report recommends that EPA formally adopt as its sustainability paradigm the widely used three pillars approach which means considering the environmental, social and economic impacts of an action or decision. Health should be expressly included in the social pillar. EPA should also articulate its vision for sustainability and develop a set of sustainability principles that would underlie all agency policies and programs.

*Sustainable Development and the Environmental Protection Agency* United States. Environmental Protection Agency, Lea Swanson, Patrick McCabe, G. J. Filbin, 1993. International Law and Sustainable Development Alan E. Boyle, David Freestone, 1999. Written by leading experts in International Law, this collection of essays deals with the most recent developments in international environmental law since the UN Rio Conference on Environment and Development in 1992. It focuses on sustainable development, natural resources, Antarctica, the protection of marine environment and the revolution in international fisheries law. *A Commitment to the Future* Mostafa Kamal Tolba, 1992. The concept of sustainable development must now take its place among concerns for equality between races, sexes and nations. The struggle for these has been hard even though the participants have been present and able to fight for their rights. Equity between the generations is a more difficult goal as the unborn are not present to make their concerns known. We must accept responsibility for future generations. This may be the foremost challenge facing policy makers in the closing years of the 20th century and beyond. Global Development and the Environment Joel Darmstadter, 1992. Twenty years after the landmark Stockholm Conference on the Human Environment in 1972, the United Nations has convened a Conference on Environment and Development (UNCED) in Rio de Janeiro in June 1992. The 1989 UN resolution calling for the conference singles out among other global problems issues of biodiversity, water and other natural resources, atmospheric integrity and human health as ones whose management requires strengthened international cooperation and attention. Whatever explicit and effective commitments to control greenhouse gases that threaten global warming for example are negotiated at UNCED, profound problems relating to the linked pursuit of environmental, natural resource and economic objectives are certain to survive. The two week meeting of government leaders, technical experts and representatives of environmental constituencies. To be sure, participants may well assert that the goals of environmental protection, natural resource adequacy and economic growth are compatible. But a probing of the question of sustainability of development inspires less confidence that potential

problems and conflicts in the pursuit of these goals are fully appreciated in the international community much less that the consensus needed to easily achieve the goals will be forthcoming In Global Development and the Environment Perspectives on Sustainability researchers at Resources for the Future examine some of the enduring issues whether or not officially under consideration at the conference or raised there informally that cannot be ignored in any attempt to pursue aspirations concerning the environment and development The lasting value of UNCED may depend on the extent to which it diverse participants couple political rhetoric with willingness to confront these difficult issues once this earth summit fades into history
