Current Developments in Anthropological Genetics James H. Mielke, 2012-12-06 The papers in this volume were presented as part of the University of Kansas Department of Anthropology Distinguished Lecture Program on Anthropological Genetics Consecutively each contributor spent approximately a week on the campus at Lawrence participating in a seminar The contributors to this volume were not on campus at one time but visited us on alternating weeks hence a symposium type interchange was not possible between all participants However the students and faculty of

Kansas University acted as a sounding board This volume can be considered a companion and continuation of *Methods and Theories of Anthropological Genetics* which was based upon a symposium on the state of the art in 1971 This present volume reflects what we consider to be some of the advances and current developments in anthropological genetics since 1973 Emphasis has shifted to some degree away from population structure analysis as depicted in Crawford and Workman to genetic epidemiology However population structure still remains a fertile and ongoing area of research with many theoretical questions still remaining unanswered
