H. Best,2018-06-26 A groundbreaking study that shows how countries can create innovative production based economies for the twenty first century Achieving economic growth is one of today s key challenges In this groundbreaking book Michael Best argues that to understand how successful growth happens we need an economic framework that focuses on production governance and skills This production centric framework is the culmination of three simultaneous journeys The first has been Best s visits to hundreds of factories worldwide starting early as the son of a labor organizer and continuing through his work as an academic and industrial consultant The second is a survey of two hundred years of economic thought from Babbage to Krugman with stops along the way for Marx Marshall Young Penrose Richardson Schumpeter Kuznets Abramovitz Keynes and Jacobs The third is a tour of historical episodes of successful and failed transformations focusing sharply on three core elements the production system business organization and skill formation and their interconnections Best makes the case that government should create the institutional infrastructures needed to support these elements and their interconnections rather than subsidize individual enterprises The power of Best s alternative framework is illustrated by case studies of

transformative experiences previously regarded as economic miracles America's World War II industrial buildup Germany's postwar recovery Greater Boston's innovation system Ireland's tech sector boom and the rise of the Asian Tigers and China
