Overload, Performance Incompetence, and Regeneration in Sport Manfred Lehmann, Carl Foster, Uwe Gastmann, Hans Keizer, Jürgen M. Steinacker, 2007-11-23 This volume summarizes the proceedings of the Reisensburg workshop which took place at Reisensburg Castle in November 1997 The castle is built on the site of an ancient Roman compound and situated in the south of Germany at the Danube river Scientists from Australia Austria Belgium Estonia Germany Italy Netherlands South Africa Switzerland and the United States participated in the workshop Like the 1996 workshop the proceedings of which will be published in *Medicine and Science in Sports and Exercise* in 1998 the 1997 workshop also focused on the topic of overtraining in its widest sense to deepen our knowledge in this particularly sensitive field of sports science and sports practice The authors see the present volume in a context with the proceedings presented by Gutentag and Running Injuries Saunders Philadelphia 1997 and Kneider Fry and O Toole eds *Overtraining in Sport* Human Kinetics Champaign IL 1997 Overtraining that is too much stress combined with too little time for regeneration can be seen as a crucial and threatening problem within the modern athletic community of which significance can already be recognized reading daily newspapers During the 1996 European championships a gymnast shook his head almost imperceptibly closed his eyes briefly and left the arena without looking up He was fatigue personified Suddenly I just couldn t do any more I just wanted to rest A look at his schedule showed why *Exercised* Daniel E. Lieberman, 2021-12-07 If exercise is healthy so good for you why do many people dislike or avoid it These engaging stories and explanations will revolutionize the way you think about exercising not to mention sitting sleeping sprinting weight lifting playing fighting walking jogging and even dancing Strikes a perfect balance of scholarship wit and enthusiasm Bill Bryson New York Times best selling author of *The Body* If we are born to walk and run why do most of us take it easy whenever possible Does running ruin your knees Should we do weights cardio or high intensity training Is sitting really the new smoking Can you lose weight by walking And how do we make sense of the conflicting anxiety inducing information about rest physical activity and exercise with which we are bombarded In this myth busting book Daniel Lieberman professor of human evolutionary biology at Harvard University and a pioneering researcher on the evolution of human physical activity tells the story of how we never evolved to exercise to do voluntary physical activity for

the sake of health Using his own research and experiences throughout the world Lieberman recounts without jargon how and why humans evolved to walk run dig and do other necessary and rewarding physical activities while avoiding needless exertion Exercised is entertaining and enlightening but also constructive As our increasingly sedentary lifestyles have contributed to skyrocketing rates of obesity and diseases such as diabetes Lieberman audaciously argues that to become more active we need to do more than medicalize and commodify exercise Drawing on insights from evolutionary biology and anthropology Lieberman suggests how we can make exercise more enjoyable rather than shaming and blaming people for avoiding it He also tackles the question of whether you can exercise too much even as he explains why exercise can reduce our vulnerability to the diseases mostly likely to make us sick and kill us

Scientific Foundations and Practical Applications of Periodization G. Gregory Haff, 2024-02-23 While other periodization books may discuss training theory few provide information on how to integrate various training models into the periodization process Here are just some of the approaches incorporated into Scientific Foundations and Practical Applications of Periodization Employing and blending parallel sequential and emphasis periodization models to develop athletes Synching recovery strategies with various phases and periods of training to enhance the adaptational process Manipulating nutritional strategies to magnify performance Using and interpreting monitoring data to adjust an athlete s program in accordance with the periodized plan Applicable for athletes at all levels and in any sport Scientific Foundations and Practical Applications of Periodization translates the latest research into usable information that directly enhances programming
