## **Key Topics In Ophthalmology:**

Key Clinical Topics in Ophthalmology Parham Azarbod, Peng Tee Khaw, 2020-12-15 Key Clinical Topics in Ophthalmology is an indispensable and practical guide for clinical practice and exam revision. Written and edited by a team of experts, this book provides an authoritative and up-to-date guide to common conditions in ophthalmic medicine. Presented in a concise format that enables rapid access to core information, Key Clinical Topics in Ophthalmology delivers essential clinical knowledge and practical skills for trainees in ophthalmology.

**Key Topics in Ophthalmology** R. H. Taylor, P. Shah, P. I. Murray, 1995 This text provides information on 100 major subjects presented in alphabetical order, chosen for their importance and their incidence in examinations. The book is designed as an adjunct to the standard textbooks on ophthalmology and is suitable as a revision aid for ophthalmology fellowship examinations. In each case, the topic describes the current management of a problem and the complications thereof. Qualified ophthalmologists should find a book a useful source of reference. The topics range from AIDS, allergy, and anisocoria to scleritis, uveitis, and watery eye.

*Key Topics in Ophthalmology Second Edition* R. H. Taylor, R. H. Taylor, P. Shah, P. Shah, P. I. Murray, A. Burdon, 2003-12-16 Now completely revised with many new topics, Key Topics in Ophthalmology second edition provides up-to-date coverage of key issues. The systematic format makes this book an ideal revision aid for trainees taking the postgraduate examinations in ophthalmology, as well as being a valuable reference source for qualified ophthalmologists, GPs, and opticians.

**Normal Binocular Vision** David Stidwill, Robert Fletcher, 2010-11-08 Binocular vision, i.e., where both eyes are used together, is a fundamental component of human sight. It also aids hand-eye coordination and the perception of the self within the environment. Clinical anomalies pose a wide range of problems to the sufferer, but normal binocular operation must first be understood before the eye specialist can assess and treat dysfunctions. This is a major new textbook for students of optometry, orthoptics, and ophthalmology, and also of psychology. Chapters span such key topics as binocular summation, fusion, the normal horopter, anatomy of the extraocular muscles, oculomotor control, binocular integration, and depth perception. Fully illustrated throughout, the book includes self-assessment exercises at the end of each chapter and sample experiments in binocular vision functioning.

*Revision in Sciences Basic to Ophthalmology* Raman Malhotra, David Easty, 2024-11-01 This is a self-assessment book for candidates for postgraduate examinations in ophthalmology, principally the FRCOphth Part I. It covers all of the sciences fundamental to ophthalmology: anatomy (60 questions), physiology (93 questions), pharmacology (36), pathology (33), and microbiology (42). Questions are grouped according to specialty area, followed by true/false answers that are all supported with concise explanations. The book can therefore be used for learning as well as practice. The book's most innovative feature is the set of 21 structured essay plans covering the major topics of concern in this field. It is notoriously difficult to provide model answers to essay questions, but here the authors have developed a new, highly visual approach with the consistent use of icons to provide an at-a-glance understanding.
