Linguistic Categories, Language Description and Linguistic Typology

Luca Alfieri, Giorgio Francesco Arcodia, Paolo Ramat, 2021-07-15 Few issues in the history of the language sciences have been an object of as much discussion and controversy as linguistic categories. The eleven articles included in this volume tackle the issue of categories from a wide range of perspectives and with different foci in the context of the current debate on the nature and methodology of the research on comparative concepts particularly the relation between the categories needed to describe languages and those needed to compare languages. While the first six papers deal with general theoretical questions the following five confront specific issues in the domain of language analysis arising from the application of categories. The volume will appeal to a very broad readership advanced students and scholars in any field of linguistics but also specialists in the philosophy of language and scholars interested in the cognitive aspects of language from different subfields: neurolinguistics, cognitive sciences, psycholinguistics, anthropology.

Linguistic Universals

Ricardo Mairal, Juana Gil, 2006-10-19 The discovery of linguistic universals, the properties that all languages have in common, is a fundamental goal of linguistic research. Linguists face the task of accounting for why languages which apparently differ so greatly from one another on the surface display striking similarities in their underlying structure. This volume brings together a team of leading experts to show how different linguistic theories have approached this challenge. Drawing on work from both formal and functional perspectives it provides a comprehensive overview of the most notable work on linguistic universals with chapters on syntax, semantics, phonology, morphology and typology and explores a range of central issues such as the relationship between linguistic universals and the language faculty and what linguistic universals can tell us about our biological make up and cognitive abilities. Clear and succinct it will be invaluable to anyone seeking a greater understanding of the phenomenon that is human language.

A Grammar of Shaowu

Sing Sing Ngai, 2021-09-20 This is the first comprehensive grammar of Shaowu, a Min language spoken in Shaowu city and its environs in northwestern Fujian province, China. The book offers first-hand linguistic data collected over four years in the field, now placed at the disposal of researchers and students working in language documentation, comparative linguistics and Sinitic typology. It can serve as a reference grammar for those interested in learning the Shaowu language, thereby helping to preserve it. In addition, the book provides insights into Shaowu's classification, which has been widely debated, thus elucidating its genetic affiliation. The book first presents Shaowu's geography, demography and history. It then profiles the language's phonology and lexicon before providing a detailed description of its syntax, notably on its nominal, predicate, clausal and complex sentence structures, which are the focus of the book. The typological profile of Shaowu is also treated, with the conclusion that the language has Gan, Hakka, Mandarin and even some Wu overlays on its Min base. The Shaowu language serves an excellent example to illustrate the degree of hybridity a language can attain due to intensive language contact over time.

Linguistic Theory Volume 3 R. M. W. Dixon, 2012-05-25 Basic Linguistic Theory provides a fundamental characterization of the nature of human languages and a comprehensive guide to their description and analysis In crystal clear prose R M W Dixon describes how to go about doing linguistics He show how grammatical structures and rules may be worked out on the

basis of inductive generalisations and explains the steps by which an attested grammar and lexicon can be built up from observed utterances. He describes how the grammars and vocabulary of one language may be compared to others of the same or different families, explains the methods involved in cross-linguistic parametric analyses and shows how to interpret the results. Volume 3 introduces and examines key grammatical topics each from a cross-linguistic perspective. The subjects include number systems, negation, reflexives and reciprocals, passives, causatives, comparative constructions and questions. The final chapter discusses the relation between linguistic explanation and the culture and world view of the linguist and speakers of the language he or she is describing. The book ends with a guide to sources, a consideration of the number of languages in the world, a glossary and indexes of authors, languages and subjects covering all three volumes. Volume 1 addresses the methodology for recording, analysing and comparing languages and includes chapters on analysis, typology, phonology, the lexicon and field linguistics. Volume 2, like the present work, considers underlying principles of grammatical organization and has chapters devoted to the word, nouns and verbs, adjectives, transitivity, copula constructions, pronouns and demonstratives, possession, relative clauses and complementation. Basic Linguistic Theory is the triumphant outcome of a lifetime's thinking about every aspect and manifestation of language. The volumes comprise a one-stop introduction for undergraduate and graduate students of linguistics as well as for those in neighbouring disciplines such as psychology and anthropology.

Deconstructing Syntactic Theory Peter W. Culicover, Giuseppe Varaschin, 2025-06-12

Deconstructing Syntactic Theory is a critical examination of the assumptions and methodologies of contemporary derivational syntactic theory. The study ranges from the earliest work inspired by Chomsky's *Syntactic Structures* and *Aspects of the Theory of Syntax* to the present-day Minimalist Program. The book begins with an examination of the relationship between syntactic structure, linear order and meaning and the role of uniformity in motivating derivational analysis that assumes movement and invisible structure. A central property of such analyses is that they are cryptoconstructional: construction-specific stipulations are assumed in order to derive the form and meaning of expressions. The second part looks at a range of technical and empirical problems of derivational syntax which require theoretical stipulations and devices to properly constrain cryptoconstructional analyses. The focus is particularly on problems relating to movement and problems of invisibility. In Part III the authors turn to the question of the independent justification of syntactic structure, arguing that much hierarchical structure is not only unnecessary but also does not yield optimal analyses for a number of grammatical phenomena. Part IV focuses on the use of syntax to account for phenomena that are arguably not syntactic; it concludes that using syntax to model semantic phenomena is at best not necessary and at worst empirically inadequate. Similarly, using syntax to model morphological relations works only for a narrow subset of cases and cannot be sustained more generally without causing significant internal problems. The book concludes with a review of minimalism, laying out aspects of the logic of the Minimalist Program, its assumptions and their motivations and consequences. The authors argue that minimalism is best

achieved by a leaner theory of linguistic representations along the lines of the constructional architecture of Simpler Syntax as proposed by Culicover and Jackendoff 2005 Handbook of Cognitive Mathematics Marcel Danesi, 2022-10-31 Cognitive mathematics provides insights into how mathematics works inside the brain and how it is interconnected with other faculties through so called blending and other associative processes This handbook is the first large collection of various aspects of cognitive mathematics to be amassed into a single title covering decades of connection between mathematics and other figurative processes as they manifest themselves in language art and even algorithms It will be of use to anyone working in math cognition and education with each section of the handbook edited by an international leader in that field

Linguistics Encyclopedia Kirsten Malmkjaer, 2003-09-01 Alphabetically arranged encyclopedia contains 80 main articles covering 150 sub areas of the discipline discussing their development methodology terminology theoretical issues and controversies from syntax to speech therapy **Nonfinite Structures in Theory and Change** D. Gary Miller, 2002 This book investigates the precise nature of nonfinite structures and explores the ways in which they change Gary Miller examines a broad range of structures including traditional infinitives gerunds and participles across different Indo European and some non Indo European languages now and in the past As structures which are nonfinite in some languages are not so in others the question arises whether the concept nonfinite has any meaning or explanatory power In seeking an answer to this conundrum the author shows that infinitives with subject person agreement such as in West Greenlandic Modern Greek Portuguese Welsh and Hungarian share properties with prototypical nonfinite formations Professor Miller examines languages with morphologically marked tense on infinitives including Ancient Greek and Latin and Modern Turkish He demonstrates that nonfinite structures that can be assigned non structural inherent or semantic case differ systematically from those with either structural or no case The book concludes with a substantial history of infinitives gerunds and participles in Old and Middle English which reveals why and how nonfinite structures change and vary over time Gary Miller's innovative theoretical reasoning and the wide range of evidence on which it is brought to bear make this book a considerable contribution to the understanding of grammatical change and its formal expression as well as to the history of English The Word Order of the Gospel of Luke Ivan Shing Chung Kwong, 2005-12-09 This work studies the word order of the Gospel of Luke and some of its prominent messages with consideration of systemic functional linguistic theories The first part of the work focuses on the relative positions of four constituents subject predicate complement and circumstantial adjunct of different types of Lukan clauses independent dependent infinitival participial and embedded clause The result gives some unmarked typical or common word order patterns and some marked word order patterns of all Lukan clauses The second part traces the foregrounded messages of the Gospel based on their related marked word order patterns incorporated with functional linguistic phenomena The result highlights the messages of Jesus disciples and his parents failure in understanding him Pilate's crime of handing over Jesus and Jesus predictions of his future sufferings and Peter's future
