

LCP in 7.6 : Related changes

Local LCP during restarts

Partial LCP enables LCP duration to be reduced, with positive effects for REDO + UNDO log sizes.

However, during an initial node restart, there will be no existing LCP state on disk for the starting node.

If the starting node performs a full LCP of all fragments then the LCP duration may be excessive and cause excessive disk space usage on other nodes.

To avoid this, a starting node can perform a number of local-only pLCPs to build up on-disk LCP state prior to joining a distributed LCP to get the final 'durable' seal of approval.
