Environmental Hydraulics:

Environmental Hydraulics V.P. Singh, Willi H. Hager, 2013-06-29 Triggered primarily by ill effects of polluted air, soil and water resources on living species, public concern for environmental quality has been growing during the past four decades or so. One manifestation of this concern is found in occurrence of public debates as well as in the demand for full environmental impact assessment before a water resources project is approved. Engineering soundness and economic feasibility are no longer sufficient criteria for construction of hydraulic works. As a result, environmental considerations have become very much a part of hydraulic analyses. In response to growing environmental concerns, the field of hydraulics has expanded and a new branch called Environmental Hydraulics has emerged. The focus of this branch is on hydraulic analyses of those environmental issues that are important for protection, restoration and management of environmental quality. The motivation for this book grew out of the desire to provide a hydraulic discussion of some of the key environmental issues. It is hoped that the book would serve to stimulate others to write more comprehensive texts on this subject of growing importance.

Environmental Hydraulics for Open Channel Flows Hubert Chanson, 2004-10-14. Environmental Hydraulics is a new text for students and professionals studying advanced topics in river and estuarine systems. The book contains the full range of subjects on open channel flows including mixing and dispersion, Saint Venant equations, method of characteristics and interactions between flowing water and its surroundings, air entrainment, sediment transport. Following the approach of Hubert Chanson's highly successful undergraduate textbook *Hydraulics of Open Channel Flow*, the reader is guided step by step from the basic principles to more advanced practical applications. Each section of the book contains many revision exercises, problems and assignments to help the reader test their learning in practical situations. Complete text on river and estuarine systems in a single volume. Step by step guide to practical applications. Many worked examples and exercises.

Pedersen,2012-12-06 The present lecture notes cover a first

course in the most common types of stratified flows encountered in Environmental Hydraulics. Most of the flows are buoyancy flows i.e. currents in which gravity acts on small density differences. Part I presents the basic concepts of stagnant density stratified water and of flowing non miscible stratified fluids. The similarity to the presumed well known open channel flow subject to a reduced gravity is illustrated. Part II treats the miscible density stratified flows. In outlining the governing equations the strong coupling between the turbulence the mixing and the mean flow is emphasized. The presentation and discussions of the basic governing equations are followed by illustrative examples. Separate chapters are devoted to Dense Bottom Currents Free Penetrative Convection Wind driven Stratified Flow Horizontal Buoyancy Flow and Vertical jet plumes. Part III presents some examples of practical problems solved on the basis of knowledge given in the present lecture notes. It is the author's experience that the topics treated in chapter 8 and in the subsequent chapters are especially well suited for self tuition followed by a study circle.

ACKNOWLEDGEMENT The author has benefited by the valuable help of his colleagues at the Institute of Hydrodynamics and Hydraulic Engineering the Technical University of Denmark especially our librarian Mrs Kirsten Djurup our secretary Mrs Marianne Lewis and our technical draftsman Mrs Liselotte Norup.

The Environment in Asia Pacific Harbours Eric Wolanski, 2006-07-30. In the USA Asia and Europe as well as worldwide trade is growing rapidly and much of it depends on shipping. This is leading to the development of mega cities and mega harbours. The marine environment is degrading. Is increasing trade ecologically sustainable? This book addresses this question through harbours in the Asia Pacific region including Tokyo Bay the Pearl Estuary Hong Kong Shanghai Ho Chi Minh City Manila Bay Jakarta Bay Bangkok Singapore Klang Pearl Harbour and Darwin. Much of the world trade goes through these harbours. This book demonstrates through the writing of eminent scientists in each of these countries the oceanography and ecosystem science necessary to understand how these urbanised marine ecosystems function. It offers science based solutions to achieve ecologically sustainable development. These lessons are important not only for the Asia Pacific Region including Australia but also worldwide. The book is a wake up call that all the countries in the Asia Pacific are facing the same serious socio economic and environmental problems with varying scales. Each of these countries addresses these issues differently. This book shows that we have much to learn from each other to ensure that development does not need to be at the cost of the environment. I commend this book for its comprehensive coverage of the links between oceanography ecosystem processes and socio economic issues.
