radical revision of the basic criteria they do represent a refinement of the system enunciated in Report No 91 Important changes include the utilization of revised tissue organ weighting factors and the introduction of radiation weighting factors Also noteworthy is the introduction of an allowable reference level of intake Noteworthy too is the recommendation of an age based lifetime limit for control of occupational exposures and a major simplification of limits aimed at controlling the exposure of the embryo and fetus This Report after outlining the goals and philosophy of radiation protection and the basis for exposure limits goes on to review in some detail absorbed dose equivalent dose radiation weighting factors and effective dose Committed equivalent dose and committed effective dose are also introduced Risk estimates for radiation exposure are presented and then the dose limits are enunciated The Report also covers exposure in excess of the limits limits for unusual occupational situations guidance for emergency occupational exposure and remedial action levels for naturally occurring radiation *National Library of Medicine Current Catalog* National Library of Medicine (U.S.),1990 **Approaches to**
