Jon,Kress, Gunther,Martins , Isabel,1996-11-01 This is an impressive book It is an example of that rare item a book about complex scientific ideas expressed in clear simple language built on real teacher learner conversations Starting in the classroom or the laboratory with the most common occurrence a teacher offering an explanation it proceeds by analysing the nature of specific explanations so that teachers can gain fuller insights into what is happening Having teased out the processes of explanation the authors then reconstruct them showing how elaboration transformation and demonstration can enhance the understanding of the learner Professor Peter Mortimore How do science teachers explain science to students

What makes explanations work Is explaining science just an art or can it be described taught and learned That is the question posed by this book From extensive classroom observations the authors give vivid descriptions of how teachers explain science to students and provide their account with a sound theoretical basis Attention is given to the ways in which needs for explanation are generated how the strange new entities of science from genes to electrons are created through talk and action how knowledge is transformed to become explainable and how demonstrations link explanation and reality Different styles of explanation are illustrated from the teller of tales to those who ask students to say it my way Explaining Science in the Classroom is a new and exciting departure in science education It brings together science educators and specialists in discourse and communication to reach a new synthesis of ideas The book offers science teachers very practical help and insight

*Science in the Making at the Margin* Jrene Rahm, 2010-01-01 We know little about diverse youths engagement in science outside of school the form such engagement takes and its impact on science literacy development and identity as a potential insider to science We need to know more about why how and for whom out of school settings make a difference Science in the Making at the Margin offers some answers through an in depth and theoretically well grounded multisited ethnography of three very different out of school settings an afterschool program for girls only a youth garden program and a Math and Science Upward Bound Program Grounded in sociocultural historical theory this book explores youths meaning making of science and co constructions of new levels of understandings of science as well as how they come to position themselves in relation to science through participation in science practices at the margin The author highlights the multiplicity of learning becoming and hybridity that constitute the learning of science in the three sites studied Her analysis suggests that most youth position themselves as science users as youth who are creating with and learning through science with others in textually rich environments and situations and in ways that are meaningful to them Their identity as users of science is grounded in the forms of engagement supported by the three science practices The challenge is then to leverage such literacy beyond the practices themselves
