Words and the Mind Barbara Malt, Phillip Wolff, 2010-03 The study of word meanings promises important insights into the nature of the human mind by revealing what people find to be most cognitively significant in their experience However as we learn more about the semantics of various languages we are faced with an interesting problem Different languages seem to be telling us different stories about the mind For example important distinctions made in one language are not necessarily made in others What are we to make of these cross linguistic differences How do they arise Are they created by purely linguistic processes operating over the course of language evolution Or do they reflect fundamental differences in thought In this sea of differences are there any semantic universals Which categories might be given by the genes which by culture and which by language And what might the cross linguistic similarities and differences contribute to our understanding of conceptual and linguistic development The kinds of mapping principles structures and processes that link language and non linguistic knowledge must accommodate not just one language but the rich diversity that has been uncovered The integration of knowledge and methodologies necessary for real progress in answering these questions has happened only recently as experimental approaches have been applied to the cross linguistic study of word meaning In Words and the Mind Barbara Malt and Phillip Wolff present evidence from the leading researchers who are carrying out this empirical work on topics as diverse as spatial relations events emotion terms motion events objects body part terms causation color categories and relational categories By bringing them together Malt and Wolff highlight some of the most exciting cross linguistic and cross cultural work on the language thought interface from a broad array of fields including linguistics anthropology cognitive and developmental psychology and cognitive neuropsychology Their results provide some answers to these questions and new perspectives on the issues surrounding them

Origins of Human Innovation and Creativity

Scott A. Elias,2012-08-29 Innovation and creativity are two of the key characteristics that distinguish cultural transmission from biological transmission This book explores a number of questions concerning the nature and timing of the origins of human creativity What were the driving factors in the development of new technologies What caused the stasis in stone tool technological innovation in the Early Pleistocene Were there specific regions and episodes of enhanced technological development or did it occur at a steady pace where ancestral humans lived The authors are archaeologists who address these questions armed with data from ancient artefacts such as shell beads used as jewelry primitive musical instruments and sophisticated techniques required to fashion certain kinds of stone into tools Providing state of art discussions that step back

from the usual archaeological publications that focus mainly on individual site discoveries this book presents the full picture on how and why creativity in Middle to Late Pleistocene archeology anthropology evolved Gives a full original and multidisciplinary perspective on how and why creativity evolved in the Middle to Late Pleistocene Enhances our understanding of the big leaps forward in creativity at certain times Assesses the intellectual creativity of Homo erectus H neanderthalensis and H sapiens via their artefacts *The syntax-semantic interface* Luisa González, Beatriz Rodríguez Arrizabalaga, 2022-02-18 Se aborda el análisis de la relación e interdependencia de los componentes sintáctico y semántico del lenguaje con el propósito de poner de manifiesto la necesidad de integrar ambos aspectos en el análisis y descripción de los fenómenos lingüísticos La obra se compone de nueve trabajos el primero de ellos es un estudio teórico sobre la naturaleza de la interfaz Sintaxis Semántica mientras que en los ocho restantes se investiga dicha relación en los niveles oracional léxico y textual

A Theory of Literary Explication Kenneth B. Newell, 2011-07-12 This book presents current multidisciplinary research and theory from 17 different fields most of them never before applied to literary explication in order to provide 1 justification for the practice of a relative probability type of explication as distinguished from interpretation 2 a relativistic foundation for the preference of some explications of a literary work over others and thereby 3 a middle way between the postmodern pluralist view that a work has only an unlimited number of equally acceptable though different explications and the modern intentionalist view that it has only one acceptable explication the author's Nine of the 17 fields are of primary relevance critical theory hermeneutics probability theory philosophy of science second order logic and four fields of cognitive science linguistics epistemology neuropsychology and artificial intelligence But the book also touches upon textual criticism legal theory measure theory fuzzy logic animal learning behavior developmental psychology evolutionary epistemology and neurobiology The book shows that those using a relative probability type of explication on a literary work can achieve consensus because the healthy adult human brain has an evolved uniform and probably innate ability to form relative probability judgments and to form them in the practice of activities like reading and explicating that are not uniform and innate Lastly the book contributes to the scholarly areas of explication theory and practice first by providing a relativistic foundation for a craft explication that currently is not acknowledged to have any foundation but nonetheless continues and will continue to be practiced and second by presenting a means relative epistemic probability by which judging some explications of a literary work to be more acceptable than others may be justified philosophically an uncommon circumstance in this postmodern era in which philosophical justification of many beliefs and practices is thought to be untenable

Nietzsche and Adorno on Philosophical Praxis, Language, and Reconciliation Paolo A. Bolaños, 2021-01-12

Nietzsche and Adorno on Philosophical Praxis Language and Reconciliation Towards an Ethics of Thinking offers a philosophical notion of an ethics of thinking a kind of thinking that is receptive to the non identical character of the world of human and non human objects Paolo A Bola os experiments with the ideas of Friedrich Nietzsche and Theodor W Adorno who are presented as contemporary proponents of the Fr hromantik tradition Bola os offers a reconstruction of the respective philosophies of language of Nietzsche and Adorno as well as a rehearsal of their critique of metaphysics and identity thinking in order to develop a notion of philosophical praxis that is grounded in the ethical dimension of thinking Via Nietzsche and Adorno Bola os argues that thinking s performative participation in uncertainty broadens the domain of reason thereby also broadening our conceptual capacities and our receptivity to new possibilities of thinking As an ethical praxis thinking guards itself from the error of solidification thereby opening philosophy to a reconciliatory as opposed to domineering reception of the world
