Shoecraft, 2025-01-24 Dr Shoecraft may be the only mathematician since the New Math in the 1960s to seriously analyze the
lowly subject of arithmetic and how to teach it His breakthrough came when he experimented with teaching what needs to be
understood instead of known memorized like teaching why addition problems until the algorithm they are using supposedly
becomes cemented in their brains By teaching the essence of arithmetic in sensible ways and appealing to children s love of
games songs and movement he s proven that virtually ALL children can learn arithmetic the foundation of algebra higher
mathematics science technology and more even music When children understand arithmetic they own it It s no lonver just
their teacher s math It s their math America s children are being held back in math because of how arithmetic is drug out in
elementary school Virtually every textbook based elementary school math program in use today is mind numbing in its
repetitiveness from grade to grade The reason for the redundancy is to slow down the teaching of arithmetic so it can be
memorized Research shows that the human brain is not designed to remember things learned by rote when no longer
practiced That s acknowledged in the use it or lose it aphorism that states the obvious that we remember what we use and
forget what we don t You know that to be true if you ve ever forgotten things you once knew as well as your own name things
like an old address or a license plate number Every child can understand base ten numeration when taught hands on with
arithmetic blocks Thereby every child can understand base ten arithmetic And every child can learn how to count out the
number facts like 5 7 12 17 8 9 6 X 7 42 and 56 7 8 and if they forget one never have to guess and risk ridicule and bad
grades if they guess wrong What matters in teaching arithmetic is not how much a child can remember but how much they
can figure out if when they forget **HBJ Algebra 1, with Trigonometry** Arthur F. Coxford, 1990 **NICEM Update of**
