Centrifugal Pumps Igor Karassik,J. Terry McGuire,2012-12-06 This last the education of pump users is precisely what this book was intended to do To what extent we must have achieved our purpose our readers must decide My good friend and associate J T Terry McGuire and I have been working very closely together for a long time Our view of engineering problems and of their solutions coincide to an astonishing degree When I was asked to prepare a second edition of my book Centrifugal Pumps it was logical that I turned to Terry and suggested that he be my coauthor on this project He agreed to do so and his cooperation has been most valuable both in improving the resultant work and in easing my burden It would be presumptuous on my part to pretend that nothing has changed in the technology of centrifugal pumps during the 30 years since I prepared the manuscript for the first edition of this book Let me then speak of some of these changes

Computational and Numerical Challenges in Environmental Modelling Zahari Zlatev,Ivan Dimov,2006-05-02 Many large mathematical models not only models arising and used in environmental studies are described by systems of partial differential equations The discretization of the spatial derivatives in such models leads to the solution of very large systems of ordinary differential equations These systems contain many millions of equations and have to be handled over large time intervals by applying many time steps up to several hundred thousand time steps Furthermore many scenarios are as a rule to be run This explains the fact that the computational tasks in this situation are enormous Therefore it is necessary to select fast numerical methods to develop parallel codes and what is most important when the problems solved are very large to organize the computational process in a proper way The last item which is very often underestimated but let us re iterate which is very important is the major topic of this book In fact the proper organization of the computational process can be viewed as a preparation of templates which can be used with different numerical methods and different parallel devices The development of such templates is described in the book It is also demonstrated that many comprehensive environmental studies can successfully be carried out when the computations are correctly organized Thus this book will help the reader to understand better that while a it is very important to select fast numerical methods as well as b it is very important to develop parallel codes this will not be sufficient when the problems solved are really very large In the latter case it is also crucial to exploit better the computer architecture by organizing properly the computational process Use of templates in connection with the treatment of very large models Performance of comprehensive environmental studies Obtaining reliable and robust information about pollution levels Studying the impact of future climatic changes on high pollution levels Investigating trends related to critical levels of pollution
