European Geographic Information Infrastructures Peter A. Burrough,I. Masser,2003-05-20 Although it is generally accepted that there is a growing demand for multinational and pan European databases there is little available on the problems encountered in different types of multinational geographic information applications nor has there been much discussion of the broader legal and constitutional issues involved at the supranational **Geographic Information**

Systems to Spatial Data Infrastructures Ian Masser,2019-09-25 This book draws on author s wealth of knowledge working on numerous projects across many countries It provides a clear overview of the development of the SDI concept and SDI worldwide implementation and brings a logical chronological approach to the linkage of GIS technology with SDI enabling data The theory and practice approach help understand that SDI development and implementation is very much a social process of learning by doing The author masterfully selects main historical developments and updates them with an analytical perspective promoting informed and responsible use of geographic information and geospatial technologies for the benefit of society from local to global scales Features Subject matter spans thirty years of the development of GIS and SDI Brings a social science perspective into GIS and SDI debates that have been largely dominated by technical considerations Based on a world wide perspective as a result of the author s experience and research in the USA Australia Canada Brazil Peru China India Korea Malaysia and Japan as well as most European countries Draws upon professional and academic experience relating to pioneering UK and European GIS research initiatives Includes updated historical material with an analytical perspective explaining what was done right and what didn t work Geographic Information Roger A.

GIS And Health Anthony Gattrell, M Loytonen, 2003-09-02 The potential users of GIS for health related analysis and applications are legion In this edited collection there are extensive examinations of appropriate methodologies for spatial analysis and spatial statistics in analyzing health data Chapters explore the links with GIS and consider some of the assumptions and problems associated with such analyses A range of chapters explore the associations between for example air pollution and ill health and between pesticide exposure and disease risk The book also covers statistical and cartographic methods for analyzing data for small areas and methods for health assessment needs

Spatial Database Systems Albert K.W. Yeung, G. Brent Hall, 2007-05-23 The decision to write this book was motivated by a number of factors First although several useful textbooks on spatial databases have recently been published this is an area of spatial information science that has lagged somewhat behind the rapid advances of the technology and the profusion of books on domain specific applications Second much of the information pertaining to spatial database technologies is only available in scattered journal papers and conference proceedings and prior to this book no single effort has been made to sift through this expansive literature and unite the key contributions in a single volume The tasks of sourcing and coherently integrating relevant contributions is daunting for students many of whom have a substantial number of competing demands placed on them This book should make the task of knowledge building less daunting Third and perhaps most importantly an apparent

trend in many spatial information science programs is to focus from first or second year undergraduate through to fourth year courses on learning to work confidently and independently with increasingly complex software tools Hence many courses are technical in nature and while they continue to produce technically adept students knowledge of the broader aspects of spatial databases is often not as complete as it might be among graduates Some programs have sought to address this by introducing courses that focus on spatial data management However these courses are largely unsupported by a relevant and contemporary textbook **Bringing Geographical Information Systems into Business** David J.

Grimshaw, 1999-11-15 The complete guide to choosing and using GIS in business Over the last few years Geographical Information Systems GIS have become less expensive and easier to use and the tremendous potential of GIS to boost business productivity is finally being realized Incorporating the latest developments in GIS technology and applications this book explores what GIS has to offer companies in many different areas of industry today and how it can be successfully integrated into existing business operations Building on the success of its predecessor this Second Edition covers every key aspect of using GIS in business It explains what GIS is and helps readers gain a clear understanding of the costs and benefits of moving to a GIS New case studies from both the manufacturing and service sectors illustrate how GIS can support tactical and strategic business decision making and the book's unbiased coverage of commercially available GIS software is invaluable for anyone involved in selecting a GIS system and getting it up and running With a practical real world approach the book also addresses the main issues involved in GIS implementation paying particular attention to the integration of GIS within an organization's existing management information system An increasingly vital tool for operations and delivery of goods and services GIS makes terrific business sense for many companies but only when properly selected and applied This book gives GIS consultants practitioners and others considering the move to GIS the foundation they need to put this powerful technology to work effectively in business **International Encyclopedia of Geography, 15 Volume Set** Noel

Remote Sensing and Urban Analysis Jean-Paul Donnay, Mike J. Barnsley, Paul A. Longley, 2003-09-02 One of the key geographical developments over the last two centuries has been that of urbanisation In recent years this has exploded globally particularly in developing countries It is essential for governments planners and researchers in geography and allied fields to understand this process and the main way of being able to do this is to accurately map these changes The main method of this mapping is Remote Sensing This up to date analysis of the area looks at a wide range of methodologies currently being used to produce and analyse remotely sensed data of urban areas The authors examine the various techniques used to extract information from digital multispectral images of urban areas Donnay and Barnsley then go on to look at the identification of urban forms the delineation of agglomerations and the development of urban morphology considering the analysis of integrated data sets and surface models and going on to look at the estimation of human population levels

Mapping the Determinants of Spatial Data Sharing Uta Wehn de Montalvo, 2024-11-01 This title was first published in 2003 With the increasing use of GIS in industrialised and developing countries the availability of spatial data has become an issue that affects many public and private sector organisations They are faced with the high cost and substantial effort involved in the generation of spatial data and so the sharing of this data is increasingly being seen as a way of overcoming expense and easing availability and access But this can provide a way of using GIS effectively only if the key players involved in the use and supply of spatial data are willing to share This book employs a theory from social psychology as an organising framework to systematize the determinants of organisations spatial data sharing behaviour It develops a model which explains the likely willingness of key individuals within organisations to engage in spatial data exchanges across organisational boundaries and then tests this on a survey based in South Africa
