European Transport Policy And Sustainable Mobility:

European Transport Policy and Sustainable Mobility Jonas Akerman, David Banister, Karl Dreborg, Peter Nijkamp, Ruggero Schleicher-Tappeser, Dominic Stead, Peter Steen, 2000-10-26 It is now widely accepted that transport is becoming increasingly unsustainable and that strong policy intervention is required to reduce both the growth in transport demand and the environmental costs of transport This book challenges conventional approaches to transport by moving away from trend based analysis towards the use of scenarios to identify alternative sustainable transport futures It both summaries the development of EU transport policy and presents a critique The policy context is widened to include the global changes taking place in economics society and technology It develops new methodologies for policy making for the next 25 years

European Transport Policy and Sustainable Mobility David Banister, Jonas Akerman, Peter Nijkamp, Dominic Stead, Karl Dreborg, Peter Steen, Ruggero Schleicher-Tappeser, 2000 This text arises from the European Commission research project Policy Scenarios for Sustainable Mobility Focusing on transport and related policy analysis and decision making it sets European transport policy in context and looks at issues of sustainable development and forces of change Transport Policy and Research Liana Giorgi, Ronald J. Phoryles, 2018-01-12 This title was first published in 2003 These are some of the questions and themes addressed in this study of transport policy and research What is the meaning of sustainable mobility Is there a European common transport policy To what extent is policy relevant for transport developments What is the contribution of European transport research It addresses the dynamics surrounding policy formulation and implementation the conflicts of interest underlying these processes at the regional national and supra national levels the inherent contradictions of the ecological modernization discourse as it applies to transport and the role of the public or the citizen in determining trajectories for future developments The book distils the results of three projects that have been completed with the support of the European Commission under the Fourth Framework Transport RTD Programme namely the TENASSESS CODE TEN and POSSUM projects The majority of the contributions derive from the TENASSESS project The Routledge Handbook of European Integrations Thomas Hoerber, Gabriel Weber, Ignazio Cabras, 2022-02-27 The Routledge Handbook of European Integrations fills a significant gap in the European studies literature by providing crucial and groundbreaking coverage of several key areas that are usually neglected or excluded in European integration collections Whilst still examining the largest and most influential institutions bodies and highly funded policy areas as acknowledged dominant topics in European studies it crucially does so with much greater balance by devoting equal billing to areas such as culture in European integration or new technologies and their impact on the EU Organised around three main sections culture technology and tangibles the book offers an authoritative encyclopaedia to alternative areas in European integration from media football Erasmus and tourism to transport space AI and energy retains coverage of the dominant topics in European studies such as the Eurozone the Common Internal Market or European law but in balance with other areas of interest and

provides an essential companion to existing scholarship in European studies The Routledge Handbook of European Integrations is essential reading and an authoritative reference for scholars students researchers and practitioners involved in and actively concerned about research in the study of European integration studies The Open Access version of Chapter 14 in this book available at <http://www.taylorfrancis.com> has been made available under a Creative Commons Attribution Non Commercial No Derivatives 4.0 license

The European Environmental Conscience in EU Politics Thomas Hoerber, Gabriel

Weber, 2021-12-06 Based on empirical studies of European energy and environmental policies this book suggests that in combination these two policy fields form a consensus in the EU which might also become the basis for a new European ideology namely European sustainabilism It asks why an environmental conscience has grown since the late 1960s in the industrialised world and shows that whilst there is undeniable environmental degradation during this time and that a European environmental conscience has mainly developed through successive steps of European integration in energy policy In this connection between energy and the environmental we find one driver for European integration and indeed European identity If sustainabilism should become a European ideology it will substantially influence the way future Europeans will live This book will be of key interest to scholars and students of European Studies International Relations Political Science History Economics Sustainability Studies Environmental and Energy Policies in Europe
