## **Evaluating Health Risks An Economic Approach:**

*Evaluating Health Risks* Per-Olov Johansson, 1995-04-27 A major problem in health economics is how to give a value to changes in health This is the first book to present a comprehensive survey of the money measures that are used in such evaluations The author defines the properties of these money measures examining them in both a certain and a risky world He evaluates available empirical approaches for the assessment of the value of health changes and considers measures such as quality adjusted life years QALYS and health years equivalents HYES

**Theory and Methods of Economic Evaluation of Health Care** Magnus Johannesson, 2013-03-09 Most economic evaluations of health care programmes at the moment are cost effectiveness and cost utility analyses The problem with these methods is that their theoretical foundations are unclear This has led to confusion about how to define the costs and health effects and how to interpret the results of these studies In the environmental and traffic safety fields it is instead common to carry out traditional cost bene fit analyses of health improving programmes This striking difference in how health programmes are assessed in different fields was the original motivation for writing this book The aim of the book is to try and provide a coherent framework within cost bene fit analysis and welfare economics for the different methods of economic evaluation in the health care field The book is written in an easily accessible manner and several examples of applications of the different methods are provided It is my hope that it will be useful both for teaching purposes and as a guide for practitioners in the field Glenn C Blomquist John D Graham Rich O Connor and four anonymous referees provided helpful comments on previous versions of the manuscript I would also like to express my gratitude to the following persons for helping me to prepare the manuscript Carl Magnus Berglund Carin Blanksvard Ann Brown and Ziad Obeid

Nijkamp,G.C. Pepping,2013-03-09 Meta analysis is a formal synthesis of results and findings of scientific studies which can assist in gaining new insights explaining differences between results of similar studies or determine useful directions of research In this book we focus on the use of meta analysis in environmental economics and related fields of study The first part of the book covers the overall meta approach methodology for social sciences and economics in particular This is

followed by technical and non technical discussions of statistical and rough set techniques for analysis At appropriate places this is supplemented with reviews of applications in environmental economics and related fields In the second part of the book a number of case studies show different aspects of the application of meta analysis The research areas considered include among others tourism multipliers air pollution valuation risk and value of life pesticide price policy travel time savings and transport externality and policy issues The benefits of the appropriate application of meta analysis in environmental economics are a better use of existing information and knowledge removal of some of the subjectivity from analysis and forecasting and greater clarity as to where future efforts in environmental economic analysis can most gainfully be deployed

*Handbook of Law and Economics* A. Mitchell Polinsky, Steven Shavell, 2007-11-07 Law can be viewed as a body of rules and legal sanctions that channel behavior in socially desirable directions for example by encouraging individuals to take proper precautions to prevent accidents or by discouraging competitors from colluding to raise prices The incentives created by the legal system are thus a natural subject of study by economists Moreover given the importance of law to the welfare of societies the economic analysis of law merits prominent treatment as a subdiscipline of economics Our hope is that this two volume Handbook will foster the study of the legal system by economists The two volumes form a comprehensive and accessible survey of the current state of the field Chapters prepared by leading specialists of the area Summarizes received results as well as new developments
