First Published in 1997 Routledge is an imprint of Taylor Francis an informa company **Managing Managed Care** Michael C. Roberts,Linda K. Hurley,2012-11-19 The introduction of the concept of managed care into mental and physical health care appears to be a juggernaut of unparalleled impact The two extremes of thought about this impact are 1 that managed care is a villainous foe to be resisted in order to bring back the earlier halcyon years of independence in practice decisions with greater reimbursement for psychologists services or 2 that managed care is a laudatory attempt to restrain health care costs that are out of control and spiraling upward by rooting out mismanagement and reversing financial incentives to provide unnecessary care The former view calls managed health care such names as mangled care and distributes bumper stickers stating Just Say No to HMOs The latter view points to the slowdown of increases in health care expenditures and the enhancement of health care affordability and appropriateness for greater numbers of persons resulting from managed care cost containment strategies and service review procedures Mental or behavioral health care has been as strongly impacted as medical care under managed care Where managed care has forced practitioners attention to validated

procedures and to examining previous wasteful practices we applaud the movement. Where managed care has had adverse impact we think there needs to be greater public legal and regulatory attention to its excesses and abuses

Managed Care and Public Health Paul K. Halverson, Arnold D. Kaluzny, Curtis P. McLaughlin, Glen P. Mays, 1998 Public Health

Handbook of Research in Pediatric and Clinical Child Psychology Dennis Drotar, 2013-11-11 The professional development of researchers is critical for the future development of the fields of pediatric and clinical child psychology. In order to conduct research in pediatric and clinical child psychology, researchers need to work with a wide range of populations and master an increasingly wide range of skills, many of which are either not formally taught or considered in sufficient depth in clinical training. Such skills include the development of resources for research by writing grants to government agencies and foundations; skills in preparing research for publications concerning original research, review articles or case reports; scientific presentation skills; the ability to review and edit scientific manuscripts; and to implement and manage research in applied settings. Moreover, the increasing complexity of research in pediatric and clinical child psychology requires successful researchers in these fields to develop their expertise with a wide range of new specialized methodologies, data analytic methods, models of data analysis and methods of assessment. Finally, to enhance the relevance of their research to practice, researchers in pediatric and clinical child psychology need to integrate their work with clinical service delivery programs that are based on empirical research. The necessity to train researchers in pediatric and clinical child psychology in such multifaceted knowledge and skills places extraordinary burdens on professional training programs. Professional researchers in pediatric and clinical child psychology also are challenged to develop new knowledge and skills through continuing education and faculty development programs.
