Protocol Politics Laura Denardis, 2009-07-31 What are the global implications of the looming shortage of Internet addresses and the slow deployment of the new IPv6 protocol designed to solve this problem The Internet has reached a critical point The world is running out of Internet addresses There is a finite supply of approximately 4.3 billion Internet Protocol IP addresses the unique binary numbers required for every exchange of information over the Internet within the Internet's prevailing technical architecture IPv4 In the 1990s the Internet standards community selected a new protocol IPv6 that would expand the number of Internet addresses exponentially to 340 undecillion addresses Despite a decade of predictions about imminent global conversion IPv6 adoption has barely begun Protocol Politics examines what's at stake politically economically and technically in the selection and adoption of a new Internet protocol Laura DeNardis's key insight is that protocols are political IPv6 intersects with provocative topics including Internet civil liberties US military objectives globalization institutional power struggles and the promise of global democratic freedoms DeNardis offers recommendations for Internet standards governance based not only on technical concerns but on principles of openness and transparency and examines the global implications of looming Internet address scarcity versus the slow deployment of the new protocol designed to solve this problem
