**Syntactic Movement and Access to Universal Grammar** William J. Crawford, 2002      A Difficult Transition Mandira Sharma, Seira Tamang, 2016-10-25 The Sexual Violence and Impunity in South Asia research project coordinated by Zubaan and supported by the International Development Research Centre brings together for the first time in the region a vast body of research on this important yet silenced subject Six country volumes one each on Bangladesh Nepal Pakistan Sri Lanka and two on India as well as two standalone volumes comprising over fifty research papers and two book length studies detail the histories of sexual violence and look at the systemic institutional societal individual and community structures that work together to perpetuate impunity for perpetrators The essays in this volume focus on Nepal which though not directly colonized has not remained immune from the influence of colonialism in its neighbourhood In addition to home grown feudal patriarchal structures the writers in this volume clearly demonstrate that it is the larger colonial and post colonial context of the subcontinent that has enabled the structuring of inequalities and power relations in ways that today allow for widespread sexual violence and impunity in the country through legal systems medical regimes and social institutions The period after the 1990 democratic movement the subsequent political transformation in the aftermath of the Maoist insurgency and the writing of the new constitution has seen an increase in public discussion about sexual violence The State has brought in a slew of legislation and action plans to address this problem And yet impunity for perpetrators remains intact and justice elusive What are the structures that enable such impunity What can be done to radically transform these How must States understand the search for justice for victims and survivors of sexual violence This volume addresses these and related issues Published by Zubaan      **Index Medicus** , 2003 Vols for 1963 include as pt 2 of the Jan issue Medical subject headings

The Role of Working Memory and Executive Function in Communication under Adverse Conditions Mary Rudner, Carine Signoret, 2016-06-20 Communication is vital for social participation However communication often takes place under suboptimal conditions This makes communication harder and less reliable leading at worst to social isolation In order to promote participation it is necessary to understand the mechanisms underlying communication in different situations Human communication is often speech based either oral or written but may also involve gesture either accompanying speech or in the form of sign language For communication to be achieved a signal generated by one person has to be perceived by another person attended to comprehended and responded to This process may be hindered by adverse conditions including factors that may be internal to the sender e g incomplete or idiosyncratic language production occur during transmission e g background noise or signal processing or be internal to the receiver e g poor grasp of the language or sensory impairment The extent to which these factors interact to generate adverse conditions may differ across the lifespan Recent work has shown that successful speech communication under adverse conditions is associated with good cognitive capacity including efficient working memory and executive abilities such as updating and inhibition Further frontoparietal networks associated

with working memory and executive function have been shown to be activated to a greater degree when it is harder to achieve speech comprehension To date less work has focused on sign language communication under adverse conditions or the role of gestures accompanying speech communication under adverse conditions It has been proposed that the role of working memory in communication under such conditions is to keep fragments of an incomplete signal in mind updating them as appropriate and inhibiting irrelevant information until an adequate match can be achieved with lexical and semantic representations held in long term memory Recent models of working memory highlight an episodic buffer whose role is the multimodal integration of information from the senses and long term memory It is likely that the episodic buffer plays a key role in communication under adverse conditions The aim of this research topic is to draw together multiple perspectives on communication under adverse conditions including empirical and theoretical approaches This will facilitate a scientific exchange among individual scientists and groups studying different aspects of communication under adverse conditions and or the role of cognition in communication As such this topic belongs firmly within the field of Cognitive Hearing Science Exchange of ideas among scientists with different perspectives on these issues will allow researchers to identify and highlight the way in which different internal and external factors interact to make communication in different modalities more or less successful across the lifespan Such exchange is the forerunner of broader dissemination of results which ultimately may make it possible to take measures to reduce adverse conditions thus facilitating communication Such measures might be implemented in relation to the built environment the design of hearing aids and public awareness

*Building up the inhibitory synapse* Enrico Cherubini, Fast inhibitory transmission exerts a powerful control on neuronal excitability and network oscillations thought to be associated with high cognitive functions An alteration of inhibitory signaling is associated with major neurological and psychiatric disorders including epilepsy Once released from presynaptic nerve terminals GABA and glycine cross the synaptic cleft and bind to postsynaptic receptors localized in precise apposition to presynaptic release sites The functional organization of inhibitory synapses consists in a dynamic process which relies on a number of highly specialized proteins that ensure the correct targeting clustering stabilization and subsequent fate of synaptic receptors Among the proteins involved in this task the tubulin binding protein gephyrin plays a crucial role Through its self oligomerization properties this protein forms hexagonal lattices that trap GABAA and glycine receptors and link them to the cytoskeleton By directly interacting with cell adhesion molecules of the neuroligin neuroligin families that connect presynaptic and postsynaptic neurons at synapses gephyrin ensures a backward control of presynaptic signaling In addition changes in clusters size is dynamically regulated by lateral diffusion of neurotransmitter receptors between the synaptic and extrasynaptic compartments and by their interaction with synaptic scaffold proteins The aim of this Research Topic research articles and reviews is to bring together experts on the cellular and molecular mechanisms regulating the appropriate assembly location and function of pre and postsynaptic specializations at inhibitory synapses A particular emphasis will be on the role of receptor trafficking in synaptic stabilization and plasticity

**Nitrogen Deposition, Critical Loads and Biodiversity** Mark A. Sutton, Kate E. Mason, Lucy J. Sheppard, Harald Sverdrup, Richard Haeuber, W. Kevin Hicks, 2014-04-10 This volume brings together extended reviews and papers of new scientific research on atmospheric nitrogen deposition impacts globally While there is a wealth of evidence on the magnitude components and effects of nitrogen disposition on floral biodiversity in Europe and North America there is an obvious lack of information on impacts on above and below ground fauna and all impacts in other parts of the world with no clear overview of how the different strands of evidence fit together This overall synthesis is targeted at the international conventions but is equally readable for scientists environmental managers conservation agencies and policy makers This timely book highlights the global nitrogen deposition problem Major regions of the world are exceeding sustainability thresholds for adverse effects on ecosystem function and biodiversity This highlights the importance of ongoing work including under the Convention on Biological Diversity in developing indicators and monitoring nitrogen deposition effects to enable appropriate measures This book presents a milestone towards this global goal as the international community works toward meeting the Aichi Biodiversity Targets especially Target 8 By 2020 pollution including from excess nutrients has been brought to levels that are not detrimental to ecosystem function and biodiversity Braulio Ferreira de Souza Dias Executive Secretary Convention on Biological Diversity This key volume highlights the global challenge to reduce
