2. A special-purpose 30-horsepower electric motor has an efficiency of 90%. Its purchase and installation price is \$2,200. A second 30-horsepower high-efficiency motor can be purchased for \$3,200, and its efficiency is 93%. Either motor will be operated 4,000 hours per year at full load, and electricity costs \$0.10 per kilowatt-hour (kWh). MARR = 15% per year, and neither motor will have a market value at the end of the eight-year study period. Which motor should be chosen by PW method?

**Problem** Brian Glenney,2024-12-31 This book presents a novel pluralist strategy for answering Molyneux's 300 year old conundrum: Would a person born blind but given sight identify a shape previously known only by their touch? The author interweaves historical scholarship with contemporary philosophical work and empirical research on animal infant and adult human perception. The author argues that we need a new approach to Molyneux's problem because we do not know what the problem is really about and it is untestable because a Molyneux subject cannot be physically realized. He criticizes Molyneux's question for its simplistic taxonomy of the blind that groups significant individual differences into a singular ontology. Research in the cognitive sciences confirms that various kinds of blindness can co-occur such as ocular, cortical, and psychological blindness. Therefore, the author adopts an explanatory pluralism for answering Molyneux's problem which includes no yes and no answer answers according to the domain of inquiry being used. This account provides a research-based answer to a long-standing problem using previously unheeded insights, particularly from animal cross-modal perception studies, to retell a more complex story of perception, its levels of explanation, and integration. *A Pluralist's Guide to Solving Molyneux's Problem* will be of interest to researchers and advanced students working in comparative psychology.

Belsley, Erricos Kontoghiorghes, 2009-08-18 *Handbook of Computational Econometrics* examines the state of the art of computational econometrics and provides exemplary studies dealing with computational issues arising from a wide spectrum of econometric fields, including such topics as bootstrapping, the evaluation of econometric software, and algorithms for control, optimization, and estimation. Each topic is fully introduced before proceeding to a more in-depth examination of the relevant methodologies and valuable illustrations. This book provides self-contained treatments of issues in computational econometrics with illustrations and invaluable bibliographies. Brings together contributions from leading researchers. Develops the techniques needed to carry out computational econometrics. Features network studies, non-parametric estimation, optimization techniques, Bayesian estimation, and inference testing methods, time series analysis, linear and nonlinear methods, VAR analysis, bootstrapping developments, signal extraction software, history, and evaluation. This book will appeal to econometricians, financial statisticians, econometric researchers, and students of econometrics at both graduate and advanced undergraduate levels.      **Looking at Art Philosophically** Tom Supensky, 2012-08

The purpose of this book is to present to the reader a series of philosophical ideas that assist in understanding one's position in the world of art and some thinking on art and creativity intended to awaken the aesthetic aspects of making art. There is no intention to review historical philosophical concepts nor is there any specific inclusion of contemporary theories on art philosophy. What is included are those philosophies important to the developing artist that are more commonplace in nature, often neglected in

art education yet vitally necessary to the true artist Finally this book is intended to stimulate the reader into asking such questions as who am I why art and what is art It is hopeful that the reader finds an aesthetic foundation a personal and honest place in the world of art
