Multivariate Algorithmics in Biological Data Analysis Johannes Uhlmann,2011 Combinatorial Optimization Alexander Schrijver,2003-02-12 This book offers an in depth overview of polyhedral methods and efficient algorithms in combinatorial optimization These methods form a broad coherent and powerful kernel in combinatorial optimization with strong links to discrete mathematics mathematical programming and computer science In eight parts various areas are treated each starting with an elementary introduction to the area with short elegant proofs of the principal results and each evolving to the more advanced methods and results with full proofs of some of the deepest theorems in the area Over 4000 references to further research are given and historical surveys on the basic subjects are presented

Ball,1995-10-30 The papers in this volume consider a general area of study known as network routing The underlying problems are conceptually simple yet mathematically complex and challenging How can we best route material or people from one place to another Or how can we best design a system for instance locate facilities to provide services and goods as efficiently and equitably as possible The problems encountered in answering these questions often have an underlying combinatorial structure for example either we dispatch a vehicle or we do not or we use one particular route or another The problems also typically have an underlying network structure a communication or transportation network In addition models for these problems are often very large with hundreds or thousands of constraints and variables A companion volume in the Handbook series entitled Network Models treats basic network models such as minimum cost flows matching and the travelling salesman problem as well as several complex network topics not directly related to routing such as network design and network reliability The Cumulative Book Index ,1992 A world list of books in the English language **Index of Conference Proceedings** British
