Buil-Aranda, 2014-01-22 During the last years the amount of RDF data has increased exponentially over the Web exposed via SPARQL endpoints These SPARQL endpoints allow users to direct SPARQL queries to the RDF data Federated SPARQL query processing allows to query several of these RDF databases as if they were a single one integrating the results from all of them This is a key concept in the Web of Data and it is also a hot topic in the community Besides of that the W3C SPARQL WG has standardized it in the new Recommendation SPARQL 1.1 `SPARQL 1.1` This book provides a formalisation of the W3C proposed recommendation This formalisation allows to identify existing errors and allows to correct them before the implementation phase or when the execution of these federated queries start The book constitutes a valuable resource for any implementer since it also proposes solutions to the problems identified as well as proposing a set of SPARQL pattern reordering rules which reduce the execution time of federated queries significantly `SPARQL 1.1` Another strong point of this book is the research methodology followed It states clearly the problems in the state of the art next defines the research hypothesis for next providing a thoroughly analysis of the semantics of the SPARQL 1.1 specification Once the theoretical part is concluded the book steps into the implementation part describing clearly the implementation decisions for finally

Advances and Innovations in Systems Computing Sciences and Software Engineering includes a set of rigorously reviewed world class manuscripts addressing and detailing state of the art research projects in the areas of Computing Sciences Software Engineering and Systems Advances and Innovations in Systems Computing Sciences and Software Engineering includes selected papers from the conference proceedings of the International Conference on Systems Computing Sciences and Software Engineering SCSS 2006 which was part of the International Joint Conferences on Computer Information and Systems Sciences and Engineering CISSE 2006 All aspects of the conference were managed on line not only the reviewing submissions and registration processes but also the actual conference Conference participants authors presenters and attendees only needed an internet connection and sound available on their computers in order to be able to contribute and participate in this international ground breaking conference The on line structure of this high quality event allowed academic professionals and industry participants to contribute work and attend world class technical presentations based on rigorously refereed submissions live without the need for investing significant travel funds or time out of the office Suffice to say that CISSE received submissions

from more than 70 countries for whose researchers this opportunity presented a much more affordable dynamic and well planned event to attend and submit their work to versus a classic on the ground conference The CISSE conference audio room provided superb audio even over low speed internet connections the ability to display PowerPoint presentations and cross platform compatibility the conferencing software runs on Windows Mac and any other operating system that supports Java In addition the conferencing system allowed for an unlimited number of participants which in turn granted CISSE the opportunity to allow all participants to attend all presentations as opposed to limiting the number of available seats for each session
