Armstrong, Marianne E. Krasny, Jonathon P. Schuldt, 2018-11-15 Environmental educators face a formidable challenge when they approach climate change due to the complexity of the science and of the political and cultural contexts in which people live There is a clear consensus among climate scientists that climate change is already occurring as a result of human activities but high levels of climate change awareness and growing levels of concern have not translated into meaningful action *Communicating Climate Change* provides environmental educators with an understanding of how their audiences engage with climate change information as well as with concrete empirically tested communication tools they can use to enhance their climate change program Starting with the basics of climate science and climate change public opinion Armstrong Krasny and Schuldt synthesize research from environmental psychology and climate change communication

weaving in examples of environmental education applications throughout this practical book Each chapter covers a separate topic from how environmental psychology explains the complex ways in which people interact with climate change information to communication strategies with a focus on framing metaphors and messengers This broad set of topics will aid educators in formulating program language for their classrooms at all levels Communicating Climate Change uses fictional vignettes of climate change education programs and true stories from climate change educators working in the field to illustrate the possibilities of applying research to practice Armstrong et al ably demonstrate that environmental education is an important player in fostering positive climate change dialogue and subsequent climate change action Thanks to generous funding from Cornell University the ebook editions of this book are available as Open Access from Cornell Open cornellpress.cornell.edu/cornell-open and other Open Access repositories

Amid Shifting Sands James Gordon Nelson, 2022-12-16 The United Arab Emirates are renowned for their enormous production of oil and the rise of great cities like Dubai and Abu Dhabi which attract millions of tourists annually It is as if the great aridity of the country did not exist Yet the UAE is essentially a vast desert thinly peopled for

thousands of years by nomads grazing sheep camels and growing a few crops in great oases like Al Ain and Liwa Early people used spears and falcons to hunt rich populations of oryx gazelle ibex and the iconic migratory bird the houbara These animals were decimated by the introduction of European vehicles and guns in the 1920s and later by the oil boom in the 1950s and 1960s Today the desert is virtually devoid of these wild animals This and many other fascinating little known highlights of the complex history of the lands now known as the UAE are revealed in this book *Exploring Your Community, Discovering Other Communities, Many People in Many Places, and Picture Atlas* Kathryn Fugate,1966 Course of Study Monographs Berkeley (Calif.).
