Is Science Neurotic:

Is Science Neurotic? Nicholas Maxwell, 2004 Is Science Neurotic sets out to show that science suffers from a damaging but rarely noticed methodological disease rationalistic neurosis Assumptions concerning metaphysics human value and politics implicit in the aims of science are repressed and the malaise has spread to affect the whole academic enterprise with the potential for extraordinarily damaging long term consequences Is Science Neurotic? Nicholas Maxwell, 2004-12-14 Is Science Neurotic sets out to show that science suffers from a damaging but rarely noticed methodological disease rationalistic neurosis Assumptions concerning metaphysics human value and politics implicit in the aims of science are repressed and the malaise has spread to affect the whole academic enterprise with the potential for extraordinarily damaging long term consequences The book begins with a discussion of the aims and methods of natural science and moves on to discuss social science philosophy education psychoanalytic theory and academic inquiry as a whole It makes an original and compelling contribution to the current debate between those for and those against science arguing that science would be of greater human value if it were more rigorous we suffer not from too much scientific rationality but too little The author discusses the need for a revolution in the aims of science and academic inquiry in general and in a lively and accessible style spells out a thesis with profound importance for the long term future of humanity , The Metaphysics of Science and Aim-Oriented Empiricism Nicholas Maxwell, 2019-03-09 This book gives an account of work that I have done over a period of decades that sets out to solve two fundamental problems of philosophy the mind body problem and the problem of induction Remarkably these revolutionary contributions to philosophy turn out to have dramatic implications for a wide range of issues outside philosophy itself most notably for the capacity of humanity to resolve current grave global problems and make progress towards a better wiser world A key element of the proposed solution to the first problem is that physics is about only a highly specialized aspect of all that there is the causally efficacious aspect Once this is understood it ceases to be a mystery that natural science says nothing about the experiential aspect of reality the colours we perceive the inner experiences we are aware of That natural science is silent about the experiential aspect of reality is no reason whatsoever to hold that the experiential does not objectively exist A key element of the proposed solution to the second problem is that physics in persistently accepting unified theories only thereby makes a substantial metaphysical assumption about the universe it is such that a unified pattern of physical law runs through all phenomena We need a new conception and kind of physics that acknowledges and actively seeks to improve metaphysical presuppositions inherent in the methods of physics The problematic aims and methods of physics need to be improved as physics proceeds These are the ideas that have fruitful implications I set out to show for a wide range of issues for philosophy itself for physics for natural science more generally for the social sciences for education for the academic enterprise as a whole and most important of all for the capacity of humanity to learn how to solve the grave global problems that menace our future and thus make progress to a better wiser

world It is not just science that has problematic aims in life too our aims whether personal social or institutional are all too often profoundly problematic and in urgent need of improvement We need a new kind of academic enterprise which helps humanity put aims and methods improving meta methods into practice in personal and social life so that we may come to do better at achieving what is of value in life and make progress towards a saner wiser world This body of work of mine has met with critical acclaim Despite that astonishingly it has been ignored by mainstream philosophy In the book I discuss the recent work of over 100 philosophers on the mind body problem and the metaphysics of science and show that my earlier highly relevant work on these issues is universally ignored the quality of subsequent work suffering as a result My hope in publishing this book is that my fellow philosophers will come to appreciate the intellectual value of my proposed solutions to the mind body problem and the problem of induction and will as a result join with me in attempting to convince our fellow academics that we need to bring about an intellectual institutional revolution in academic inquiry so that it takes up its proper task of helping humanity learn how to solve problems of living including global problems and make progress towards as good as wise and enlightened a world as possible

Science and the Pursuit of Wisdom Leemon McHenry, 2013-05-02
Nicholas Maxwell's provocative and highly original philosophy of science urges a revolution in academic inquiry affecting all branches of learning so that the single minded pursuit of knowledge is replaced with the aim of helping people realize what is of value in life and make progress toward a more civilized world This volume of essays from an international interdisciplinary group of scholars engages Maxwell in critical evaluation and celebrates his contribution to philosophy spanning forty years Several of the contributors like Maxwell took their inspiration from Sir Karl Popper's philosophy of science and were connected to the department he created at the London School of Economics In the introductory chapter Maxwell provides an overview of his thought and then defends his views against objections in a concluding essay

World Crisis, The - And What To Do About It: A Revolution For Thought And Action Nicholas Maxwell, 2021-04-07 Science and technology have made the modern world possible but also created all the global problems that threaten our future the climate crisis the COVID 19 pandemic mass extinction of species environmental degradation overpopulation lethal modern war and the menace of nuclear weapons Nicholas Maxwell world renowned philosopher of science and author of 14 books argues that all these problems have come about because humans have solved only the first of two great problems of learning how to acquire scientific knowledge and technological know how but not the second how to create a civilized wise world The key disaster of our times is that we have science without wisdom At present universities all over the world are devoted to the pursuit of specialized knowledge and technology or knowledge inquiry Maxwell contends that they need to be radically transformed so that their basic function becomes to help humanity tackle global problems with a more rigorous and socially beneficial perspective he calls wisdom inquiry The World Crisis And What to Do About It spells out in detail the changes that need to be made to academic inquiry why they need to be made and how they would enable universities to help humanity actively and effectively

tackle and solve current global problems Related Link s **The Nature of Science** Fernando Espinoza,2011-10-16 The role of science in society along with its nature and development are commonly misunderstood by students in the social sciences and humanities and even those studying in the field Fernando Espinoza shines light on these misconceptions to give readers a deeper understanding of science and its effect and influence upon society through historical philosophical and sociological perspectives This book incorporates the mandates by national organizations such as the National Research Council and National Science Teachers Association and is a useful text for required courses of general education majors and science courses for preservice teachers *Karl Popper, Science and Enlightenment* Nicholas Maxwell,2017-09-26 Here is an idea that just might save the world It is that science properly understood provides us with the methodological key to the salvation of humanity A version of this idea can be found in the works of Karl Popper Famously Popper argued that science cannot verify theories but can only refute them and this is how science makes progress Scientists are forced to think up something better and it is this according to Popper that drives science forward But Nicholas Maxwell finds a flaw in this line of argument Physicists only ever accept theories that are unified theories that depict the same laws applying to the range of phenomena to which the theory applies even though many other empirically more successful disunified theories are always available This means that science makes a questionable assumption about the universe namely that all disunified theories are false Without some such presupposition as this the whole empirical method of science breaks down By proposing a new conception of scientific methodology which can be applied to all worthwhile human endeavours with problematic aims Maxwell argues for a revolution in academic inquiry to help humanity make progress towards a better more civilized and enlightened world Global Philosophy Nicholas Maxwell,2014-11-05 This book is about education learning rational inquiry philosophy science studies problem solving academic inquiry global problems wisdom and above all the urgent need for an academic revolution Despite this range and diversity of topics there is a common underlying theme Education ought to be devoted much more than it is to the exploration real life open problems it ought not to be restricted to learning up solutions to already solved problems especially if nothing is said about the problems that provoked the solutions in the first place A central task of philosophy ought to be to keep alive awareness of our unsolved fundamental problems especially our most fundamental problem of all encompassing all others How can our human world and the world of sentient life more generally imbued with the experiential consciousness free will meaning and value exist and best flourish embedded as it is in the physical universe This is both our fundamental intellectual problem and our fundamental problem of living The essays in this volume seek to provoke a concerted effort to transform our institutions of learning so that they become rationally and effectively devoted to helping us learn how to create a wiser world Our most serious problems of living are so grim so imbued with suffering wasted lives and unnecessary death that the idea of approaching them in a playful spirit seems sacrilegious We need to keep alive tackling of intellectual problems so that playful capacities can be exercised if for no other reason and

other reasons there are of course aplenty There are two really worthy impulses behind all rational inquiry delight and compassion

How Universities Can Help Create a Wiser World Nicholas Maxwell,2014-03-18 In order to make progress towards a better world we need to learn how to do it And for that we need institutions of learning rationally designed and devoted to helping us solve our global problems make progress towards a better world It is just this that we lack at present Our universities pursue knowledge They are neither designed nor devoted to helping humanity learn how to tackle global problems problems of living in more intelligent humane and effective ways That this book argues is the key disaster of our times the crisis behind all the others our failure to have developed our institutions of learning so that they are rationally organized to help us solve our problems of living above all our global problems Having universities devoted almost exclusively to the pursuit of knowledge is a recipe for disaster Scientific knowledge and technological know how have unquestionably brought great benefits to humanity But they have also made possible even caused our current global crises above all the impending crisis of global warming In this lucid and provocative book Nicholas Maxwell argues convincingly that we need urgently to bring about a revolution in universities round the world so that their basic aim becomes wisdom and not just knowledge

The Science of Pleasure Harvie Ferguson,2005-09-29 In this rich and original work the author argues that science is the highest expression of bourgeois thought and whilst it may have liberated mankind it has also devised new forms of repression discipline and control

Wisdom in the University Ronald Barnett,Nicholas Maxwell,2013-09-13 This provocative and challenging book questions how people think about what universities should seek to do and how they should respond to the grave problems of our age It addresses issues such as What is wisdom Ought universities to seek promote and teach wisdom and what would this involve Does it mean we need a revolution in the aims and methods of academic inquiry What implications would the pursuit of wisdom have for science for social inquiry and the humanities for education Is it reasonable to ask of universities that they take up the task of helping humanity learn how to create a wiser world Is there a religious dimension to wisdom What can non academics do to encourage universities to take wisdom seriously Would the pursuit of wisdom be possible given that universities are increasingly subjected to commercial pressures With contributions from leading experts in various fields *Wisdom in the University* is essential reading for all those interested in the future of universities and philosophy of education This book was previously published as a special issue of *London Review of Education*

The Neurotic's Guide to Avoiding Enlightenment Chris Niebauer, Ph.D.,2014-03-10 Has self improvement really improved the self More than ever people are on a quest for self improvement and enlightenment People are watching their egos or losing their egos in order to find peace of mind or to get along better with others And yet the more we try to lose our ego the more of it there is to lose The more we try to make peace the more we find conflict It is exactly what happens when we try not to think of the number 3 and that is all we can think about Our efforts seem to have the opposite effect and this is due to the way the left side of the brain processes information Neuroscience discovered that

the left brain makes up elaborate stories and convincing explanations It is the left brain that makes up the most elaborate and convincing story of all the story of who you think you are And the more we try to get out of this story the deeper we find ourselves in it because it is the function of the left brain to work on the law of opposition Try not to be anxious and that s exactly what happens Try not to worry and you will be flooded with anxious thoughts And the same is true for self improvement The more we try to improve our story the more the story needs to be improved The left brain excels at these games even when it plays by pretending not to play If I said that all attempts at self improvement are futile how would you respond Would you reflexively think I m wrong Is there any way not to play these games of the left brain Which part of your brain do you think is asking this question This book was written for the ordinary person who has an extraordinary curiosity for who they are how thoughts work and why they cannot control their thoughts It is a practical guide that uses examples from my kids favorite movies and TV shows from the 80s and 90s along with simple exercises so you can see for yourself if any of this is on track While no special knowledge of neuroscience is required you may understand many of the examples if you ve seen an episode or two of Star Trek or Seinfeld While this work is based on the teachings of Alan Watts and Eckhart Tolle it integrates the findings of modern neuroscience which surprisingly reveals a similar message It is the desire for enlightenment that is the biggest block to happiness and peace in fact it is the only block It is not until one gives up the quest to find oneself improve oneself or be more spiritual that one can ever find the peace they are looking for And it is not your ego that gives up this quest it is you For more info please see my blog at <http://worriedbuddha.com> The Journal of Mental Science ,1900 Vol 77 includes Yearbook of the Association 1931 *Re-Purposing Universities for Sustainable Human Progress* Iain Stewart,Victoria Hurth,Stephen Sterling,2022-03-31 **Climate Change Challenge (3C) and Social-Economic-Ecological Interface-Building** Sunil Nautiyal,Ruediger Schaldach,K V Raju,Harald Kaechele,Bill Pritchard,Kottapalli Sreenivasa Rao,2016-06-04 This book is the outcome of two International Conferences held at the ISEC in Bangalore India the international conference on Climate Change and Social Ecological Economical Interface Building Modelling Approach to Exploring Potential Adaptation Strategies for Bio resource Conservation and Livelihood Development held during 20 21 May 2015 and jointly organized by the Centre for Ecological Economics and Natural Resources CEENR Institute for Social and Economic Change ISEC and the Centre for Environmental Systems Research CESR University of Kassel Germany and the international conference Climate Change and Food Security the Global and Indian Contexts jointly hosted by the CEENR ISEC and the School of Geosciences University of Sydney on 18 19 February 2015 The selected papers presented in this book portray a broad range of international research efforts aimed at developing a deeper understanding of human environment systems but also at translating scientific knowledge into political and societal solutions and responses to the challenge of climate change TIME the Science of Creativity The Editors of TIME,2018-08-03 From ancient drawings to the genius of Leonardo and Einstein to the imagination that colors our everyday life the drive to create innovate and make
