## **Isa 2000 The System For Occupational Hea:**

**Mandatory elements** Matt Seaver, Liam O'Mahony, 1999 ISA 2000 represents a departure from the usual approach to managing health and safety. Its starting point is not legislation but good management practice. The rationale for this is simple: occupational health and safety legislation is invariably based on good practice but not all good practice is enshrined in legislation. Logically, therefore, using good practice as the starting point should result in a more comprehensive and effective control system which automatically ensures compliance with the law and this is what ISA 2000 provides. It also provides an extremely useful mechanism for complying with the new OH S standard for BSI OHSAS 18001. The system contains a set of initiatives comprising 233 individual elements which cover the entire spectrum of occupational health and safety. These are laid out in a formal structure that facilitates the building of the system and auditing it later on. This volume, Volume 1, contains those elements that should be implemented as part of the health and safety management system of any company in any industry sector. They have been selected to provide management controls against the general hazards encountered in all workplaces large or small and as such reflect minimum compliance with fundamental safety law. Volume 2 contains further elements that may need to be included for reasons of legal requirement or the particular circumstances of the organization such as the industry sector. The elements are described in detail with practical advice on how they can be implemented together with samples of procedures, forms and checklists. ISA 2000 is a practical approach to health and safety enabling busy managers to organize effectively their existing efforts and ensuring that scarce resources are deployed in the most cost effective manner.

The elements are described in detail with practical advice on how they can be implemented together with samples of procedures, forms and checklists.
