Developmental Time and Timing Gerald Turkewitz,Darlynne A. Devenny,2013-09-05 Many theorists now believe that development emerges out of the coming together of multiple influences on the developing organism To understand development not only is it important to identify these influences but it is necessary to describe their relationship to one another In this dynamic view of development emergent organization is the result of the components of development coming

together Timing is concerned with the relationship between components that have different rates of development This book brings together the work of several investigators who have contributed to our understanding of the impact of timing on development through the examination of different functions and different organisms By juxtaposing their work it is possible to see that the concept of timing has explanatory value at various levels of organization for the understanding of development The book s unifying theme allows the reader to make conceptual analogies across species and across levels of organization without being reductionistic Presenting the work of researchers in developmental and experimental psychology biopsychology neuropsychology life span development and medicine the book offers a theoretical base from which to examine the value of using timing as a construct and specific examples of research programs which have utilized timing to frame their research questions

Life-span Developmental Psychology E. Mark Cummings, Anita L. Greene, Katherine H. Karraker, 2014-01-02 Although there has been a significant increase in studies of stress and coping processes in recent years researchers have often approached these topics from rather narrow and constrained perspectives Furthermore little communication has occurred across disciplines and research directions resulting in the emergence of several relatively isolated literatures An outgrowth of the Eleventh Biennial West Virginia University Conference on Life Span Development this volume emphasizes two major themes the importance of taking a life span approach to the study of stress and coping and the development of new and more complete conceptual models of stress and coping processes The first to approach these subjects from a life span perspective this book includes papers by distinguished researchers from each of the major periods of the life span and brings together the cognitive and socioemotional traditions in the study of dealing with pressures The editors hope that this facilitation of communication among researchers with diverse views will help create a broadening and integration of perspectives

Behavior, Health, and Aging Stephen B. Manuck, Richard Jennings, Bruce Rabin, Andrew S. Baum, 2014-04-08 A dramatic shift in the average age of the U S population and the increasing number of elderly Americans has introduced new and challenging healthcare dilemmas This book addresses these issues with contributed chapters by the leading authorities in the field of behavioral medicine It deals with health and healthcare needs of the elderly by considering basic changes that result from

aging and some of the more specific problems that accompany it. Content highlights include a review of the basic tenets of genetics and molecular biology including some of the methods of looking at heritable differences in health and well being. Quality of life concerns are addressed including the differences between men and women as well as other gender issues. Several chapters deal with the effects of aging on immunity. The latter part of the book emphasizes the psychosocial implications of aging on cardiovascular disease. Chronic illness among the elderly is also addressed. Aging Cindy S. Bergeman, 1997-04-30. Why do people age differently? Research in the field of gerontology has indicated that there are large individual differences in personality, cognitive functioning, physical health, and psychological well being as well as in the quality of life in the later years. It is this variability and the reasons why people age differently that this book explores. Thoughtfully written, Aging presents an overview of what is known about genetic and environmental influences on aging. Beginning with an overview of family adoption and twin designs, author Cindy S. Bergeman examines such topics as the research in the area of longevity and health, cognitive functioning, personality, and psychopathology, and social support, life events, and measures of the family environment. The book concludes with a summary of the field of gerontological behavioral genetics. This book will stimulate discussion and future work about the origins of individual differences in later life and will be invaluable to professionals and practitioners in the fields of developmental psychology, psychology, aging, family studies, and nursing. Context and Development Robert Cohen, Alexander W. Siegel, 2014-02-04. The purpose of this book is to explore meaningful integrations of developmental processes and functioning with conceptualizations of context, a term traditionally denoting physical settings, social arenas, or perceptual or social backdrops in relation to a focal point. However, the study of context has taken a considerably more unique and vibrant form in recent years; the term is becoming more than a substitute for background independent variables. Rather, the contributions of context to behavior, thought, feelings, and vice versa are becoming central issues in many research domains. This text is a collection of empirical and theoretical accounts for understanding context; its focus is on integrating the study of context with the science of developmental psychology. Although the authors work in many different areas of the field and with different populations, they all converge on a central methodological conceptual theme of contextualism, which is presented as the dynamic integration of intraindividual factors with environmental and social environmental factors. Developmental Influences on Adult Intelligence K. Warner Schaie, 2013. This volume presents the history, latest data, and results from the Seattle Longitudinal Study (SLS). The purpose of the SLS is to study various aspects of psychological development during the adult years. Focusing on a random sample of 500 adults ranging in age from 25 to 95 years old, the SLS is organized around 5 fundamental questions.
