Life Under Ice:

Life in the Cold Peter J. Marchand, 2014-01-07 Peter J Marchand's *Life in the Cold* remains the one book that offers a comprehensive picture of the interactions of plants and animals including humans with their cold weather environment. Focusing on the problems of winter active organisms, Marchand illuminates the many challenges of sustaining life in places that demand extraordinary adaptations. The fourth edition of this classic text includes a new chapter on climate change and its effects on plants and animals wintering in the North.

What We Know About Extraterrestrial Intelligence Michael Ashkenazi, 2016-09-23 Have you ever wondered what could happen when we discover another communicating species outside the Earth? This book addresses this question in all its complexity. In addition to the physical barriers for communication such as the enormous distances where a message can take centuries to reach its recipient, the book also examines the biological problems of communicating between species, the problems of identifying a non-Terrestrial intelligence, and the ethical, religious, legal, and other problems of conducting discussions across light years. Most of the book is concerned with issues that could impinge on your life: how do we share experiences with ETI? Can we make shared laws? Could we trade? Would they have religion? The book addresses these and related issues, identifying potential barriers to communication and suggesting ways we can overcome them. The book explores this topic through reference to human experience, through analogy and thought experiment, while relying on what is known to date about ourselves, our world, and the cosmos we live in.

An Earthling's Guide to Outer Space Bob McDonald, 2019-10-22 Beloved science commentator Bob McDonald takes us on a tour of our galaxy, unraveling the mysteries of the universe and helping us navigate our place among the stars. How big is our galaxy? Is there life on those distant planets? Are we really made of star dust? And where do stars even come from? In *An Earthling's Guide to Outer Space* we finally have the answers to all those questions and more. With clarity, wisdom, and a great deal of enthusiasm, McDonald explores the curiosities of the big blue planet we call home, as well as our galactic neighbours, from Martian caves to storm clouds on Jupiter to the nebulae at the far end of the universe. So if you're pondering how to become an astronaut or what dark matter really is, or how an asteroid wiped out the dinosaurs, look no further. Through a captivating mix of stories, experiments, and illustrations, McDonald walks us through space exploration past and present and reveals what we can look forward to in the future. *An Earthling's Guide to Outer Space* is sure to satisfy science readers of all ages and to remind us earthbound terrestrials just how special our place in the universe truly is.

Strickberger's Evolution Brian Hall, Benedikt Hallgrímsson, 2008 Thoroughly updated and reorganized, Strickberger's *Evolution* Fourth Edition presents biology students with a basic introduction to prevailing knowledge and ideas about evolution, discussing how, why, and where the world and its organisms changed throughout history. Keeping consistent with Strickberger's engaging writing style, the authors carefully unfold a broad range of philosophical and

historical topics that frame the theories of today including cosmological and geological evolution and its impact on life the origins of life on earth the development of molecular pathways from genetic systems to organismic morphology and function the evolutionary history of organisms from microbes to animals and the numerous molecular and populational concepts that explain the earth's dynamic evolution

The Limits of Organic Life in Planetary Systems National Research Council, Division on Earth and Life Studies, Board on Life Sciences, Division on Engineering and Physical Sciences, Space Studies Board, Committee on the Origins and Evolution of Life, Committee on the Limits of Organic Life in Planetary Systems, 2007-07-26 The search for life in the solar system and beyond has to date been governed by a model based on what we know about life on Earth: terran life. Most of NASA's mission planning is focused on locations where liquid water is possible and emphasizes searches for structures that resemble cells in terran organisms. It is possible, however, that life exists that is based on chemical reactions that do not involve carbon compounds that occurs in solvents other than water or that involves oxidation-reduction reactions without oxygen gas. To assist NASA incorporate this possibility in its efforts to search for life, the NRC was asked to carry out a study to evaluate whether nonstandard biochemistry might support life in solar system and conceivable extrasolar environments and to define areas to guide research in this area. This book presents an exploration of a limited set of hypothetical chemistries of life: a review of current knowledge concerning key questions or hypotheses about nonterran life and suggestions for future research.

An Astrobiology Strategy for the Search for Life in the Universe National Academies of Sciences, Engineering, and Medicine, Division on Engineering and Physical Sciences, Space Studies Board, Committee on Astrobiology Science Strategy for the Search for Life in the Universe, 2019-04-20 Astrobiology is the study of the origin, evolution, distribution, and future of life in the universe. It is an inherently interdisciplinary field that encompasses astronomy, biology, geology, heliophysics, and planetary science, including complementary laboratory activities and field studies conducted in a wide range of terrestrial environments. Combining inherent scientific interest and public appeal, the search for life in the solar system and beyond provides a scientific rationale for many current and future activities carried out by the National Aeronautics and Space Administration (NASA) and other national and international agencies and organizations. Requested by NASA, this study offers a science strategy for astrobiology that outlines key scientific questions, identifies the most promising research in the field, and indicates the extent to which the mission priorities in existing decadal surveys address the search for life's origin, evolution, distribution, and future in the universe. This report makes recommendations for advancing the research, obtaining the measurements, and realizing NASA's goal to search for signs of life in the universe.
