Rapid Prototyping Patri K. Venuvinod, Weiyin Ma, 2013-04-17 Since the dawn of civilization mankind has been engaged in the conception and manufacture of discrete products to serve the functional needs

of local customers and the tools technology needed by other craftsmen In fact much of the progress in civilization can be attributed to progress in discrete product manufacture The functionality of a discrete object depends on two entities form and material composition For instance the aesthetic appearance of a sculpture depends upon its form whereas its durability depends upon the material composition An ideal manufacturing process is one that is able to automatically generate any form freeform in any material However unfortunately most traditional manufacturing processes are severely constrained on all these counts There are three basic ways of creating form conservative subtractive and additive In the first approach we take a material and apply the needed forces to deform it to the required shape without either adding or removing material i e we conserve material Many industrial processes such as forging casting sheet metal forming and extrusion emulate this approach A problem with many of these approaches is that they focus on form generation without explicitly providing any means for controlling material composition In fact even form is not created directly They merely duplicate the external form embedded in external tooling such as dies and molds and the internal form embedded in cores etc Till recently we have had to resort to the subtractive approach to create the form of the tooling Modeling and Simulation in Engineering Catalin Alexandru,2012-03-07 This book provides an open platform to establish and share knowledge developed by scholars scientists and engineers from all over the world about various applications of the modeling and simulation in the design process of products in various engineering fields The book consists of 12 chapters arranged in two sections 3D Modeling and Virtual Prototyping reflecting the multidimensionality of applications related to modeling and simulation Some of the most recent modeling and simulation techniques as well as some of the most accurate and sophisticated software in treating complex systems are applied All the original contributions in this book are jointed by the basic principle of a successful modeling and simulation process as complex as necessary and as simple as possible The idea is to manipulate the simplifying assumptions in a way that reduces the complexity of the model in order to make a real time simulation but without altering the precision of the results **Proceedings of the Symposium on Electrochemical Technology in Electronics**

Lubomyr Taras Romankiw,Tetsuya Ōsaka,1988 3D Printing Ram K.
