Thompson, Arno Tausch, Denis J. Dean, Euel Elliott, Jonas Van Vossolle, Peter Herrmann, Stephen I. Ternyik, Leo Nefiodow, Simone Nefiodow, Anton L. Grinin, Valentina M. Bondarenko, Nikolai D. Kondratieff, Barry K. Gills, Robert A. Denemark, 2015-05-29 In the period from the 1920s to 1930s the theory of economic cycles underwent dramatic changes Due to the research of such famous economists as Nikolay Kondratieff Joseph Kitchin Wesley Mitchell Simon Kuznets and Joseph Schumpeter the idea of a whole system of economic cycles with characteristic periods between two and sixty years was developed The idea of a system of intertwined economic cycles is nowadays paramount to the school of evolutionary economics and its development promises rather interesting future outcomes That is why this issue of our Kondratieff Waves Yearbook is devoted to the interconnections between various economic cycles As to the subtitle of this volume one should note that many of the contributors refer to the system of cycles and the fact that real economic cycles make up a system whereas among different types of cycles the Juglar Kuznets and Kondratieff cycles are the most important ones for the present day economic dynamics Although Kondratieff himself considered long waves as above all an economic phenomenon the theory of the long waves became however very actively developed in connection with their political and geopolitical aspects In this Yearbook the political aspect of Kondratieff waves is the subject of several articles in the second section The last section of this Yearbook is devoted to the heritage of Kondratieff and other prominent economists The year 2015 marks the 150th anniversary of the outstanding Russian economist one of the most prominent researchers of medium term economic cycles Mikhail Tugan Baranovsky and the volume is concluded with Kondratieff's article about him Concerning 2015 we should mention another anniversary namely 30 years since the death of Simon Kuznets 1901 1985 This edition will be useful for economists social scientists as well as for a wide range of those interested in the problems of the past present and future of global economy and globalization Our Common Cosmos Zoë Lehmann Imfeld, Andreas Losch, 2018-12-27 This volume collects an international body of voices as a timely response to a rapidly advancing field of the natural sciences The contributors explore how the disciplines of theology earth and space sciences contribute to the debate on constantly expanding ethical challenges and the prospect of humanity's future The discussions offered in this volume see the community as central to a sustainable and ethical approach to earth and space sciences examining the role of theology in this communal approach but also recognizing theology itself as part of a community of humanity disciplines Examining the necessity for interaction between disciplines this collection draws on voices from biodiversity studies geology aesthetics literature astrophysics and others to illustrate precisely why a constructive and sustainable dialogue is needed within the current scientific climate Exploring the Invisible Lynn Gamwell, 2002 This sumptuous and stunningly illustrated book shows through words and images how directly profoundly and indisputably modern science has transformed modern art

Beginning in the mid nineteenth century a strange and exciting new world came into focus a world of microorganisms in myriad shapes and colors prehistoric fossils bizarre undersea creatures spectrums of light and sound molecules of water and atomic particles Exploring the Invisible reveals that the world beyond the naked eye made visible by advances in science has been a major inspiration for artists ever since influencing the subjects they choose as well as their techniques and modes of representation Lynn Gamwell traces the evolution of abstract art through several waves beginning with Romanticism She shows how new windows into telescopic and microscopic realms combined with the growing explanatory importance of mathematics and new definitions of beauty derived from science broadly and profoundly influenced Western art Art increasingly reflected our more complex understanding of reality through increasing abstraction For example a German physiologist s famous demonstration that color is not in the world but in the mind influenced Monet s revolutionary painting with light As the first wave of enthusiasm for science crested abstract art emerged in Brussels and Munich By 1914 it could be found from Moscow to Paris Throughout the book are beautiful images from both science and art some well known others rare that reveal the scientific sources mined by Impressionist and Symbolist painters Art Nouveau sculptors and architects Cubists and other nineteenth and twentieth century artists With a foreword by astronomer Neil deGrasse Tyson Exploring the Invisible appears in an age when both artists and scientists are exploring the deepest meanings of life consciousness and the universe

On Vision and Being Human: Exploring the Menstrual, Neurological and Symbolic Origins of Religious Experience Bruce Rimell, 2015-07 Visionary and religious experiences are ubiquitous among human beings but why do we experience them as coming from a hidden reality beyond the senses Why should we believe in the existence of deities despite the mundane evidence of our own eyes Why do we as intelligent primates ascribe any importance to these imaginary realities at all This creative and speculative thesis seeks to answer these questions in a new way gazing into the content of visions themselves and exploring the various inner realities that gave rise to these transformative and meaningful aspects of our humanity Focusing upon symbolic cognition as a fundamental organising principle of human experience a diverse series of musings upon the nature of reality consciousness and our evolutionary origins seeks to transcend our modern artificial boundaries to arrive at a holistic and delightfully playful human image for the twenty first century An original visionary thesis illustrated with 30 beautiful drawings

Navigating Complexity in Big History David J. LePoire, Leonid Grinin, Andrey Korotayev, 2025-05-08 This book explores periodization in Big History against the background of complexity growth across the Universe on our planet and in biological social and cultural systems It traces the accelerating rise in complexity throughout history and the major historical transformations involved in the evolution of life humans and civilization It draws on concepts from physics and evolutionary biology to offer potential models of the underlying mechanisms driving this acceleration along with potential clues to how it might end In the editors introduction Chapter 1 the effort to periodize is placed within the historical context along with considerations from complexity science Subsequent chapters explore various

aspects of periodization and complexity by a identifying symmetrical cosmic and biosocial trends b testing rigor and criteria for evaluating periodization c attempting to integrate different approaches through multiple perspectives d proposing different strategies for determining geometric patterns in terrestrial bio social evolution and e applying the traditional threshold model to gain insights into possible future pathways A concluding chapter identifies commonalities research gaps and possible approaches to integration as the current state of the world system rapidly evolves while also offering a deeper understanding of complexity dynamics and historical processes Each chapter includes an extensive bibliography allowing a deeper and more detailed examination of the issues covered Recherches internationales à la lumière du marxisme ,1961

Extraterrestrials in the Catholic Imagination Jennifer Rosato,Alan Vincelette,2021-02-10 What do scientists know about the possibility of life outside our solar system How does Catholic science ction imagine such worlds What are the implications for Catholic thought This collection brings together leading scientists philosophers theologians and science fiction authors in the Catholic tradition to examine these issues In the first section Christian scientists detail the latest scientific findings regarding the possibility of life on exoplanets The second part brings together leading Catholic science fiction authors who describe how alien life forms have been prevalent in the Catholic imagination from the Middle Ages right up to the present day In the final section Catholic philosophers and theologians examine the implications of discovering intelligent life elsewhere in the universe Rather than worrying that the discovery of intelligent extraterrestrials might threaten the dignity of humans or their existence the contributors here maintain that such creatures should be welcomed as fellow creatures of God and potential subjects of divine salvation **Explorations dans l'ultra-éther de l'univers** Stéfan Christesco,1922

Evolution, Environmental Impact of Oceanic LIPs Clive R. Neal, William W. Sager, Takashi Sano, Elisabetta Erba, 2015-05 The origin evolution and environmental impact of large igneous provinces LIPs represents a topic of high scientific importance because the magmatism associated with these features cannot be directly related to plate tectonics and because the eruption of flood basalts may have global environmental consequences Oceanic LIPs are even more poorly understood due to their relative inaccessibility This volume takes a multidisciplinary approach to understanding LIP origin evolution and environmental impact in ocean basins Papers that focus on plate tectonic reconstructions petrologic and geophysical investigations of various LIPs and sedimentological and micropaleontological evidence of syn LIP sediments are presented Precious materials and data from dredging cruises and scientific ocean drilling expeditions have made this volume possible

Gender, Sexuality and Reproduction in Evolutionary Narratives Venla Oikkonen, 2013-07-18 Since the early 1990s evolutionary psychology has produced widely popular visions of modern men and women as driven by their prehistoric genes In *Gender Sexuality and Reproduction in Evolutionary Narratives* Venla Oikkonen explores the rhetorical appeal of evolutionary psychology by viewing it as part of the Darwinian narrative tradition Refusing to start from the position of dismissing evolutionary psychology as reactionary or scientifically invalid the book examines evolutionary psychologists investments in such contested concepts as teleology and variation The book traces the emergence of evolutionary psychological narratives of gender sexuality and reproduction encompassing Charles Darwin s understanding of transformation and sexual difference Edward O Wilson s evolutionary mythology and the evolution creationism controversy Richard Dawkins molecular agency and new imaging technologies the connections between adultery infertility and homosexuality in adaptationist thought Through popular literary and scientific texts the book identifies both the imaginative potential and the structural weaknesses in evolutionary narratives opening them up for feminist and queer revision This book

will be of interest to students and scholars of the humanities and social sciences particularly in gender studies cultural studies literature sexualities and science and technology studies

Life in the Cosmos Manasvi Lingam, Abraham Loeb, 2021-06-29 A rigorous and scientific analysis of the myriad possibilities of life beyond our planet Are we alone in the universe This tantalizing question has captivated humanity over millennia but seldom has it been approached rigorously Today the search for signatures of extraterrestrial life and intelligence has become a rapidly advancing scientific endeavor Missions to Mars Europa and Titan seek evidence of life Laboratory experiments have made great strides in creating synthetic life deepening our understanding of conditions that give rise to living entities And on the horizon are sophisticated telescopes to detect and characterize exoplanets most likely to harbor life *Life in the Cosmos* offers a thorough overview of the burgeoning field of astrobiology including the salient methods and paradigms involved in the search for extraterrestrial life and intelligence Manasvi Lingam and Abraham Loeb tackle three areas of interest in hunting for life out there first the pathways by which life originates and evolves second planetary and stellar factors that affect the habitability of worlds with an eye on the biomarkers that may reveal the presence of microbial life and finally the detection of technological signals that could be indicative of intelligence Drawing on empirical data from observations and experiments as well as the latest theoretical and computational developments the authors make a compelling scientific case for the search for life beyond what we can currently see Meticulous and comprehensive *Life in the Cosmos* is a master class from top researchers in astrobiology suggesting that the answer to our age old question is closer than ever before

THE TRUTH OF THE ORIGIN OF THE UNIVERSE Sabrie Soloman, 2024-06-12 In a world filled with scientific explanations and theories it can be easy to lose sight of the ultimate truth of our existence The truth is that the universe with all its intricate complexities did not come into being by mere chance or a random explosion It was carefully designed and orchestrated by a higher power a Creator who holds everything together When we look up at the night sky and see the countless stars and galaxies stretching

out into infinity we cannot help but be in awe of the sheer magnitude and beauty of it all The heavens declare the glory of God as it says in the Bible and remind us of the greatness of the one who made it all The theory of the Big Bang which posits that the universe began as a singular point and expanded over billions of years is a flawed explanation for the origin of the universe It fails to account for the intricate design and order that we see in the cosmos as well as the existence of life on earth The marvel of our planet Earth with its perfect conditions for sustaining life points to a Creator who had a purpose and a plan in mind when he made it The countless galaxies and stars that we observe in the universe are a testament to the power and creativity of God They show us that we are part of a vast and wondrous creation one that was made by an intelligent designer who had a vision for it all The theory of evolution put forth by Charles Darwin is another flawed explanation for the diversity of life on earth It fails to explain the intricate complexities of living organisms and their unique design as well as the existence of the human soul It is clear that we are not the product of blind chance or random mutations but rather the handiwork of a loving and powerful Creator The truth of the origin of the universe points to a Creator who holds everything together and has a purpose and a plan for it all God stretches out the heavens and allows light to reach us here on earth showing us his care and provision for his creation We are not the product of random chance or blind evolution but rather the cherished creation of a loving God who made us in his image Let us never forget the marvel and wonder of the universe and the greatness of the one who made it all **Exploring Space, Exploring Earth** Paul D. Lowman, 2002-08-15

An account of the impact of space exploration on our understanding of the geology and geophysics of Earth *Cosmological Theories of Value* Mark Lupisella, 2020-07-21 Building from foundations of modern science and cosmic evolution as well as psychological and philosophical perspectives of value and meaning this book explores some of humanity's biggest questions Is the Universe about something What might be roles for life and intelligence in cosmic evolution How might we think about value meaning purpose and ethics in a cosmic evolutionary context The author explores how the sciences of relativity and quantum theory combined with cosmic evolution and philosophical traditions such as process philosophy contribute to the development of a broad relationalist framework That framework helps inform perspectives such as scientific minimalism and cosmological theories of value Cosmological Reverence Cosmocultural Evolution and the Connection Action Principle are explored as examples of cosmological theories of value all of which help inform how we might think about ethics value and meaning in a cosmic context including application to the search for extraterrestrial life and the future of intelligence in the universe This book will benefit a diverse range of practitioners in philosophy science and policy including interdisciplinary fields such as Science and Society and cultural evolution studies From the Foreword This volume ranges from the sciences of cosmic evolution relativity and quantum mechanics to value theory and process philosophy all with the goal of exploring how they relate to humanity in the sense of worldviews and meaning With his three cosmological theories of value Lupisella goes beyond the bounds of most books on naturalism and into fundamental questions about the nature of the universe and our

relation to it To read *Lupisella* is to have a mind boggling experience to want to race to references to want to know more
