Locality and Logophoricity Isabelle Charneval, 2019-10-23 Locality and Logophoricity investigates what the distribution of pronominal expressions in various languages can tell us about the structure of the human language faculty The exploration of this question in the past fifty years has led to the development of a general theory of referential dependency namely Binding Theory This book focuses on Condition A of this theory which concerns referentially dependent expressions such as English herself French elle-même or Mandarin ziji Specifically it tackles an issue of apparent ambiguity presented by many of these reflexives across languages in a large number of unrelated languages we observe that the same reflexive form must obey either syntactic constraints or discourse constraints related to perspective The specific aim of the book is to describe and explain this widespread dual behavior of reflexives A detailed empirical investigation based mainly on systematically collected French English Icelandic Mandarin and Korean data leads the author to propose a unified solution to this issue This proposal has consequences both for Binding Theory and for the theory of logophoricity which addresses the impact of perspective on linguistic systems
