A Strategy for Research in Space Biology and Medicine in the New Century National Research Council, Division on Engineering and Physical Sciences, Space Studies Board, Committee on Space Biology and Medicine, 1998-10-16 Construction of the international space station scheduled to start in late 1998 ushers in a new era for laboratory sciences in space This is especially true for space life sciences which include not only the use of low gravity as an experimental parameter to study fundamental biological processes but also the study of the serious physiological changes that occur in astronauts as they remain in space for increasingly longer missions This book addresses both of these aspects and provides a comprehensive review of ground based and space research in eleven disciplines ranging from bone physiology to plant biology It also offers detailed prioritized recommendations for research during the next decade which are expected to have a considerable impact on the direction of NASA's research program The volume is also a valuable reference tool for space and life scientists

Stress Challenges and Immunity in Space Alexander Choukèr, 2011-12-20 Stress of either psychological or physical nature can activate and or paralyse humans innate and adaptive immunity However adequate immunity is crucial to the maintenance of health on earth and in space During space flight human physiology and health are challenged by complex environmental stressors which might be at their most pronounced during lunar or interplanetary missions While previous publications have addressed the physiological changes that occur during space flight this book goes further by adopting an interdisciplinary approach to analyze the complex interaction of living conditions in space the immune system and astronauts health It is explained how such analysis of the consequences of stress for the immune system may help in preventing diagnosing and counteracting immune related alterations in health on earth as well as in space A Strategy for Research in Space Biology and Medicine into the Next Century Committee on Space Biology and Medicine, Space Studies Board, Division on Engineering and Physical Sciences, National Research Council, 1998-09-30 Construction of the international space station scheduled to start in late 1998 ushers in a new era for laboratory sciences in space This is especially true for space life sciences which include not only the use of low gravity as an experimental parameter to study fundamental biological processes but also the study of the serious physiological changes that occur in astronauts as they remain in space for increasingly longer missions This book addresses both of these aspects and provides a comprehensive review of ground based and space research in eleven disciplines ranging from bone physiology to plant biology It also offers detailed prioritized recommendations for research during the next decade which are expected to have a considerable impact on the direction of NASA's research program The volume is also a valuable reference tool for space and life scientists Stress Challenges and Immunity in Space Alexander Choukèr, 2019-11-27 This book explains how stress either psychological or physical can activate and or paralyse human innate or adaptive immunity Adequate immunity is crucial for maintaining health both on Earth and in space During space flight human physiology is specifically challenged by complex environmental

The Immunogenome Jeff Radwell,2025-03-01 Your immune system is as unique as your DNA shaped by genetic inheritance environmental exposures and epigenetic modifications that influence how your body fights infections responds to vaccines and even determines your risk for autoimmune diseases cancer and chronic inflammation But what if we could decode the genetic blueprint that governs these immune response and even modify it In *The Immunogenome* examine how advances in immunogenomics epigenetics and systems biology are transforming our understanding of immune function and why genetic polymorphisms regulatory elements and environmental factors contribute to differential susceptibility This book delves into the intricate mechanisms by which transcriptional regulation DNA methylation histone modifications and non coding RNAs modulate immune gene expression inducing long lasting epigenetic reprogramming of immune pathways By bridging molecular immunology with precision medicine *The Immunogenome* presents an encyclopedic framework for understanding how genetic and epigenetic networks govern immunological resilience and dysfunction *The Immune System in Space and Other Extreme Conditions* Irina Vital'evna Konstantinova,1991 This monograph offers an insight into the human and animal immune response in space as revealed by the results of studies by a team of international scientists carried out over the past 25 years During an extensive Soviet space exploration programme involving both long and short term manned flights valuable data was obtained on the adaptive changes observed in the human immune system when subjected to extreme conditions including hypokinesia isolation and extreme temperatures The authors are specifically concerned with disorders of bone calcium metabolism provoked by long term hypokinesia and weightlessness and diseases accompanied by osteoporosis The book is intended for clinical and theoretical immunologists physiologists and cell biologists
