Immobilized Biochemical and Affinity Chromatography, 1974 Handbook of Affinity Chromatography Toni Kline, 1993-06-16 Outlining the fundamental principles by which all interactions occur this reference focuses on harnessing the biochemistry of bioorganic compounds in order to separate them presenting new techniques and applications that affect the planning of research strategies The contributors discuss how to c **IMMOBILIZED BIOCHEMICALS AND AFFINITY CHROMATOGRAPHY- PAPERS PRESENTED AT THE SYMPOSIUM ON AFFINITY CHROMATOGRAPHY AND IMMOBILIZED BIOCHEMICALS HELD IN CONJUNCTION WITH THE SOUTHEASTERN REGIONAL ACS MEETING- ADVANCES IN EXPERIMENTAL MEDICINE AND BIOLOGY**, **Immobilized Biochemicals and Affinity Chromatography**, 1974 **Molecular Interactions in Bioseparations** That T. Ngo, 2013-11-11 Rapid advances in molecular biology have accelerated the production of a great number of protein based therapeutic agents The major cost in producing these proteins appears to be associated with their purification from the complex mixture of the crude extract A major challenge to the protein biochemist and the biochemical engineer is the development of rapid efficient and cost effective purification systems This volume presents state of the art reviews of current methods used in the purification of biological macromolecules that are based on molecular interactions Thus the major emphasis is placed on affinity related techniques Part I provides a general introduction to affinity chromatography and includes a chapter describing an interesting new technique called slalom chromatography for DNA fractionations Affinity chromatography using molecules of biological origin as the affinity ligand is covered in Part II Part III describes the use of a special class of biomolecules antibodies as affinity ligands Affinity chromatography with biomimetic ligands is discussed in Part IV Newer concepts and their applications in bioseparation are presented in Part V Part VI covers affinity related techniques such as affinity based extracorporeal shunts affinity electrophoresis affinity precipitation and affinity extraction I would like to express my sincere thanks to all the authors who are recognized experts in their respective fields for their cooperation and contributions I thank the editorial staff of Plenum Press for their professionalism and Mary Phillips Born Senior Editor for her encouragement The support of my family Ping and Peilin made it possible to complete editing this book That T Chemistry of Protein Conjugation and Cross-Linking Shan S. Wong, 1991-06-18 Chemical cross linking reagents have attained great practical use in industry as well as in basic research and an understanding of their fundamental principles of reaction is paramount to their applications With broad coverage of the development and application of these reagents Chemistry of Protein Conjugation and Cross Linking discusses the mechanism of reaction and allows you to put the theory into practice The book

offers an explanation of the underlying mechanism of chemical modification surveys all the bifunctional reagents used in bioconjugation and cross linking and provides a review of practical applications of these reagents in various areas of biochemistry molecular biology biotechnology nucleic acid chemistry immunochemistry and diagnostic and biomedical disciplines It contains numerous examples and illustrations plus step by step explanations to reaction procedures It is an excellent introduction and a comprehensive reference about chemical modification

Methods of Protein Separation

Nicholas Catsimpoilas, 2013-04-18 This open end treatise on methods concerning protein separation had its beginning in an American Chemical Society symposium entitled Con temporary Protein Separation Methods which was held in Atlantic City New Jersey in September 1974 The purpose of the symposium and subse quently of the present work was to review the available modern techniques and underlying principles for achieving one of the very important tasks of experimental biology namely the separation and characterization of proteins present in complex biological mixtures Physicochemical characterization was covered only as related to the parent method of fractionation and there fore involved mostly mass transport processes Additionally the presentation of methods for gaini ng insight into complex interacting protein profiles was considered of paramount importance in the interpretation of separation patterns Finally specific categories of proteins e g chemically modified deriving from a specific tissue conjugated to different moieties etc require meticulous trial and selection and/or modification of existing methodology to carry out the desired separation In such cases the gained experience provides valuable guidelines for further experimentation Although powerful techniques exist today for the separation and related physicochemical characterization of proteins many biological fractionation problems require further innovations It is hoped that the description in the present treatise of some of the available separation tools and their limitations will provide the necessary integrated background for new developments in this area

Biochemical Technology, Part A L. Bulow, 1997-05-06 In December 1992 the Department of Pure and Applied Biochemistry at the

Chemical Center in Lund Sweden organized an international meeting the Mosbach Symposium on Biochemical Technology to

celebrate the 60th birthday of professor Klaus Mosbach one of the founders of modern biotechnology The history of Pure and Applied Biochemistry had its start in 1970 a couple of years after the foundation of the Chemical Center Klaus Mosbach has been its professor and head of Pure and Applied Biochemistry since its start During the 1980 s he also maintained a professorship at the ETH in Zurich Switzerland Professor Mosbach is internationally well known and he has world leading position within the field of immobilization of bioactive substances and cells as well as affinity chromatography In 1990 Professor Mosbach was awarded the gold medal by the Royal Swedish Academy of Engineering Sciences for his contributions to biotechnology especially on the immobilization of bioactive substances The research activities of the Department of Pure and Applied Biochemistry cover a broad area such as affinity and separation techniques bioprocess control biosensors development of new carriers and new immobilization procedures for small molecules as well as proteins and cells including animal and plant cells gene technology processes based on immobilized biocatalysts and construction of organic polymers with enzyme like properties The hallmark of the department is its diversified research that generates considerable synergistic effects that are manifested by many new techniques and concepts emanating from the laboratory during the last 20 years Several of these are marketed by various biotechnology companies At this meeting we therefore arranged for some of the world s leading experts in biochemistry and biotechnology to give lectures The topics covered comprise enzyme technology immobilization of enzymes and cells abzymes metabolic engineering biosensors and molecular recognition The official gift from the symposium committee and the participants is this Festschrift which covers several important fields of research within the area of biochemical technology We have made a very unusual approach and have let the hero of the occasion present the history of his research
