Immunology And Epidemiology:

Immunology and Epidemiology Geoffrey W. Hoffmann, Tomas Hrabá, 2013-06-29 In February 1985 a small international meeting of scientists took place at the recreation resort of the Polish Academy of Sciences in Mogilany near Cracow Poland The initiative for holding the workshop came from a working meeting on mathematical immunology and related topics at the International Institute for Applied Systems Analysis in Laxenburg Austria in November 1983 In addition to representatives of IIASA delegates of the IIASA National Member Organizations NMO of Czechoslovakia Italy and the Soviet Union took part in that working meeting The participants came to the conclusion that IIASA could play an important role in facilitating the development of research in this field The first step that they recommended to IIASA was to organize a workshop on mathematical immunology The purpose of the workshop was to review the progress that has been made in applying mathematics to problems in immunology and to explore ways in which further progress might be achieved especially by more efficient interactions between scientists working in mathematical and experimental immunology Some National Member Organizations contributed to the success of the workshop by nominating further participants working in this or related fields For instance thanks to a suggestion of the British NMO the meeting also included analyses of the interactions between the immune state of a population and epidemiological phenomena There were 33 participants at Mogilany from 11 countries namely Canada Czechoslovakia Federal Republic of Germany Hungary Japan Netherlands Poland Sweden United Kingdom USA and USSR

Immunoepidemiology Peter J. Krause, Paula B. Kavathas, Nancy H. Ruddle, 2019-10-24 This textbook focuses on the nascent field of immunoepidemiology that addresses how differences in immune responses among individuals affect the epidemiology of infectious diseases cancer hypersensitivity and autoimmunity The idea for the book originated from a course entitled Immunology for Epidemiologists at the Yale School of Public Health While many fine textbooks are available that address the immunological responses of individuals to pathogens these provided very little information regarding how immunological variation among populations affects the epidemiology of disease And yet it has long been recognized that there is great immunologic diversity among people which can have a profound effect on the epidemiology of disease Careful review of the immunologic and epidemiologic literature revealed that there have been relatively few publications concerning immunoepidemiology and that no textbook is available on the subject This textbook therefore aims to fill this void by providing a much needed tool to comprehensively and efficiently teach immunoepidemiology The book includes a section on the basic principles of immunology and then applies them to particular examples of disease in human populations The target audience for this text book are Masters of Public Health students Others who should also find it of interest include PhD students in epidemiology immunology medical students generalists and specialists in immunology infectious diseases cancer and rheumatology **University of Michigan Official Publication**, 1959 **Catalogue of the University of Michigan** University of Michigan, 1967 Announcements for the following year included in some vols
