Diagnosis and Treatment of Senile Dementia

Manfred Bergener, Barry Reisberg, 2012-12-06 Senile dementia is one of the major health problems confronting mankind in this century. To some extent the problem has of course always existed. The condition was sufficiently troubling to classical philosophers and jurists to have apparently provoked comments by Solon in approximately 500 B C and Plato in the fourth century B C. Plutarch 1967 translation. Plato 1921 translation. Medical recognition can be traced at least as far back as the second century A D. Adams 1861. However several factors have converged in this century to extend the absolute dimensions of the problem of senile dementia and to increase societal medical and scientific recognition of the magnitude of the condition. Perhaps the most important factor relating to the present importance of senile dementia is demographic. Although the human population has been increasing since the mid eighteenth century it has only been since the advent of the twentieth century that a decrease in mortality has been noted for those over the age of 45. McKeown 1976. Consequently the absolute number of aged persons and the proportion of increasingly aged persons in the populations of the world's industrial nations have been steadily increasing. For example in the United States 4% of the population was over the age of 65 in 1900. In the 1970 census this proportion had grown to 10%.
