The Enzymes ,1972-04-28 The Enzymes Single Molecule Spectroscopy R. Rigler, M. Orrit, T. Basche, 2012-12-06 One often hears that nanoscience or in other words the knowledge and control of matter at length scales of a few nanometers will be the scientific frontier of the 21st century Although it has become almost commonplace this prediction deserves some justification The technological and scientific stakes of nanoscience indeed encompass many fields of science they include the ultimate miniaturization of electronic devices to acquire store and process information and also such basic endeavors as understanding the microscopic processes and patterns responsible for the physical properties of materials or the many unsolved questions raised by the astoundingly intricate workings of living matter Although the dream of observing and controlling matter at molecular scales is nearly as old as the very concept of molecules earlier attempts at practical realizations were hampered by a scarcity of suitable access to the nanoworld During the last two decades of the 20th century owing to the several new tools which have been developed to address objects at nanometer scales the nanoworld appears closer than ever within our reach A major class of methods in nanoscience are local probe microscopies such as scanning tunnelling or atomic force microscopies They require scanning a sharp tip with molecular dimensions across the surface of the sample under study and by direct action of the tip on the sample they make nano manipulations possible The present book is devoted to another class of methods the selection and study of single optically active nano objects by purely optical means **ENZYMES: Catalysis, Kinetics and Mechanisms** N.S. Punekar, 2018-11-11 This enzymology textbook for graduate and advanced undergraduate students covers the syllabi of most universities where this subject is regularly taught It focuses on the synchrony between the two broad mechanistic facets of enzymology the chemical and the kinetic and also highlights the synergy between enzyme structure and mechanism Designed for self study it explains how to plan enzyme experiments and subsequently analyze the data collected The book is divided into five major sections 1 Introduction to

enzymes 2 Practical aspects 3 Kinetic Mechanisms 4 Chemical Mechanisms and 5 Enzymology Frontiers Individual concepts are treated as stand alone chapters readers can explore any single concept with minimal cross referencing to the rest of the book Further complex approaches requiring specialized techniques and involved experimentation beyond the reach of an average laboratory are covered in theory with suitable references to guide readers The book provides students researchers and academics in the broad area of biology with a sound theoretical and practical knowledge of enzymes It also caters to those who do not have a practicing enzymologist to teach them the subject

Enzyme Engineering E. Pye, 2013-03-09 The recent worldwide explosion of interest in enzymes as catalysts in industrial processes has arisen primarily because of the potential of major innovative advances which have taken place over the last two decades foremost among these being novel methods of enzyme immobilization and affinity chromatography for rapid enzyme purification This interest is now being further stimulated by the remarkable commercial success of several enzyme based industrial processes particularly the production of high fructose syrup in the U S and amino acid production in Japan With the initiation of these and other processes together with the readying for commercialization of several other enzyme based operations interest has expanded in other areas in which enzymes may play a useful role particularly in medicine and analytical chemistry The development of this technology has required the cooperative efforts of practitioners of several disciplines primarily chemical engineers biochemists and other life scientists Indeed from this cooperation is arising the new interdisciplinary field of Enzyme Engineering To stimulate communication information exchange and advancement of knowledge in this new field on an international level the Engineering Foundation through the efforts of Lemuel B Wingard Jr initiated in 1971 a series of international conferences on Enzyme Engineering to be held biannually The first two conferences were held in Henniker New Hampshire in the summers of 1971 and 1973 respectively while the third conference from which these proceedings derived was held in August 1975 in Portland Oregon
