Tomsia, Andreas M. Glaeser, 2012-12-06 This volume titled Proceedings of the International Materials Symposium on Ceramic Microstructures Control at the Atomic Level summarizes the progress that has been achieved during the past decade in understanding and controlling microstructures in ceramics A particular emphasis of the symposium and therefore of this volume is advances in the characterization understanding and control of microstructures at the atomic or near atomic level This symposium is the fourth in a series of meetings held every ten years devoted to ceramic microstructures The inaugural meeting took place in 1966 and focussed on the analysis significance and production of microstructure the symposium emphasized the need for and importance of characterization in achieving a more complete understanding of the physical and chemical characteristics of ceramics A consensus emerged at that meeting on the critical importance of characterization in achieving a more complete understanding of ceramic properties That point of view became widely accepted in the ensuing decade The second meeting took place in 1976 at a time of world wide energy shortages and thus emphasized energy related applications of ceramics and more specifically microstructure property relationships of those materials The third meeting held in 1986 was devoted to the role that interfaces played both during processing and in influencing the ultimate properties of single and polyphase ceramics and ceramic metal systems *Thin Films: Heteroepitaxial Systems* Amy W K Liu, Michael B Santos, 1999-06-01 Heteroepitaxial films are commonplace among today's electronic and photonic devices The realization of new and better devices relies on the refinement of epitaxial techniques and improved understanding of the physics underlying epitaxial growth This book provides an up to date report on a wide range of materials systems The first half reviews metallic and dielectric thin films including chapters on metals rare earths metal oxide layers fluorides and high Tc superconductors The second half covers semiconductor systems reviewing developments in group IV arsenide phosphide antimonide nitride II VI and IV VI heteroepitaxy Topics important to several systems are covered in chapters on atomic processes ordering and growth dynamics **Epitaxial Oxide Thin Films and Heterostructures**, 1994 *III-Nitride Semiconductor Optoelectronics*, 2017-01-05 III Nitride Semiconductor Optoelectronics covers the latest breakthrough research and exciting developments in the field of III nitride compound semiconductors It includes important topics on the fundamentals of materials growth characterization and optoelectronic device applications of III nitrides Bulk quantum well

Quantum Efficiency in Complex Systems Uli Wurfel, Michael Thorwart, Eicke R. Weber, 2011 Summary Radiationless transfer of excitation energy is at the heart of many processes in quantum physics chemistry and nanotechnology Currently the standard picture of an incoherent Föster resonant excitation transfer is being challenged by the experimental findings of a long lived quantum mechanical coherence in biomolecular light harvesting complexes The role of this in molecular aggregates is addressed in the first part of this volume Utilizing some of the underlying principles to optimize nano scale devices the second part addresses systems of colloid quantum dots and polymer based organic solar cells
