Epsteinbarr Virus And Human Cancer:

Epstein-Barr Virus and Human Cancer K. Takada, 2012-12-06 In this book outstanding researchers from the US and Japan review recent progress in Epstein Barr virus research Most people carry EBV in memory B cells in a latent stage Many malignancies such as T NK cell lymphoma AIDS associated B cell lymphoma gastric carcinoma and Hodgkin s disease have been causally linked to EBV The development of molecular biology technique has allowed us to study the roles of individual EBV genes that act in the maintenance and disruption of EBV latency

Epstein-Barr Virus and Human Cancer Kenzo Takada, 2001 Most people carry EBV in memory B cells in a latent stage Many malignancies such as T NK cell lymphoma AIDS associated B cell lymphoma gastric carcinoma and Hodgkin s disease have been causally linked to EBV The development of molecular biology technique has allowed the study of the roles of individual EBV genes that act in the maintenance and disruption of EBV latency

Epstein-Barr Virus and Human Disease P. H. Levine, D. V. Ablashi, M. Nonoyama, G. R. Pearson, R. Glaser, 2012-12-06 Since its discovery as the cause of infectious mononucleosis in 1964 the Epstein Barr virus EBV has been etiologically implicated in an increasing number of human diseases Generally considered the first human oncogenic virus because of a number of studies linking it with Burkitt s lymphoma and nasopharyngeal carcinoma NPC as well as its documented oncogenicity in nonhuman primates EBV has served as a model for identifying subsequent candidate oncogenic viruses and the stimulus for Evans revision of the Henle Koch postulates to accommodate the problems in proving viral oncogenicity in humans Research on the role of EBV in human cancer was particularly enhanced a by the pioneering work of Werner and Gertrude Henle and b by the coordinated efforts of the Special Virus Leukemia Program and its successors the Special Virus Cancer Program and the Virus Cancer Program of the National Cancer Institute NCI Initiated by Dr Frank J Rauscher who subsequently became director of the NCI and is now Vice President of the American Cancer Society and expanded by Dr John B Moloney whose contributions to cancer research were honored at this Second International Symposium on EBV and Associated Malignant Diseases these NCI contract supported programs brought together investigators from all over the world to participate in a joint effort to unravel the mystery of EBV behavior and pathogenicity It was these programs that gave us the opportunity to work with such outstanding people as Professor Yohei Ito to whom this book is dedicated

The Epstein-Barr Virus M. A. Epstein, B. G. Achong, 2012-12-06 The Epstein Barr virus was discovered 15 years ago Since that time an immense body of information has been accumulated on this agent which has come to assume great significance in many different fields of biological science Thus the virus has very special relevance in human medicine and oncology in tumor virology in immunology and in molecular virology since it is the cause of infectious mononucleosis and also the first human cancer virus etiologically related to endemic Burkitt s lymphoma and probably to nasopharyngeal carcinoma In addition continuous human lymphoid cell lines initiated and maintained by the transforming function of the virus genome provide a laboratory tool with wide and ever growing applications Innumerable

papers on the Epstein Barr virus have appeared over recent years and reports of work with this agent now constitute a veritable flood. The present book provides the first and only comprehensive authoritative overview of all aspects of the virus by authors who have been the original and major contributors in their particular disciplines. A complete and up to date survey of this unique and important agent is thus provided which should be of great interest to experts, teachers and students engaged in cancer research, virology, immunology, molecular biology, epidemiology and cell culture. Where topics have been dealt with from more than one of these viewpoints, some inevitable overlap and duplication has resulted, although this has been kept to a minimum; it has been retained in some places because of positive usefulness.

EBV-Associated Carcinomas: Presence, Role and Prevention Strategies Ala-Eddin Al Moustafa, Hussain Gadelkarim Ahmed, Ali A. Sultan, Gerburg Wulf, 2019-08-16 This Research Topic aspires to provide a platform for research papers, reviews, perspectives and thought provoking opinions and ideas about EBV infection and its role in human carcinomas as well as prevention using upcoming vaccine. This should pave the way to translate findings into cost effective strategies to eliminate EBV infection and its related cancers worldwide.

The Molecular Basis of Human Cancer William B. Coleman, Gregory J. Tsongalis, 2016-11-11 This book covers the concepts of molecular medicine and personalized medicine. Subsequent chapters cover the topics of genomics, transcriptomics, epigenomics and proteomics as the tools of molecular pathology and foundations of molecular medicine. These chapters are followed by a series of chapters that provide overviews of molecular medicine as applied broadly to neoplastic, genetic and infectious diseases as well as a chapter on molecular diagnostics. The volume concludes with a chapter that delves into the promise of molecular medicine in the personalized treatment of patients with complex diseases along with a discussion of the challenges and obstacles to personalized patient care. The Molecular Basis of Human Cancer Second Edition is a valuable resource for oncologists, researchers and all medical professionals who work with cancer.

The Association Between Viral Infection and Human Cancers Ming Hu, Jinlin Li, Bin Wang, Chengjun Wu, 2024-02-13 Research on the mechanisms of viral transformation and oncogenesis has laid the foundation for our current understanding of certain cancers. For instance, some oncogenes are activated or taken over by retroviruses and some viral proteins impair tumor suppressor gene functions. Particular viruses from multiple virus families as well as unusual or unclassified viruses have been implicated in causing cancers through natural occurrence or experimentation on animals. It is believed that 15% to 20% of all human cancer cases are linked to infections by one of seven viruses: Epstein Barr virus, hepatitis B virus, hepatitis C virus, human herpesvirus 8, human T cell lymphotropic virus type 1, human papillomaviruses and Merkel cell polyomavirus.

Oncology Alfred E. Chang, Patricia A. Ganz, Daniel F. Hayes, Timothy Kinsella, Harvey I. Pass, Joan H. Schiller, Richard M. Stone, Victor Strecher, 2007-12-08 Title consistently uses the evidence based approach. Evidence based tables make documentation of care plan easy. Interdisciplinary

orientation all aspects of patient care are covered Only book that involves experts from the entire range of cancer treatment in the fields of medical surgical and radiation oncology Includes hot topics such as prevention and breast cancer Offers ground breaking sections on the latest research and clinical applications in cancer survivorship Chapter on PET addresses imaging issues and how to get the best results Most comprehensive sections on the biology and epidemiology of cancer as compared to competitors

Cancer Virus Dorothy H. Crawford, Ingólfur Johannessen, Alan B. Rickinson, 2014-02-27 The Epstein Barr virus EBV was discovered in 1964 At the time the very idea of a virus underlying a cancer was revolutionary Cancer is after all not catching Even now the idea of a virus causing cancer surprises many people But Epstein Barr named after its discoverers Sir Anthony Epstein and Dr Yvonne Barr is fascinating for other reasons too Almost everyone carries it yet it is only under certain circumstances that it produces disease It has been associated with different apparently unrelated diseases in different populations Burkitt's Lymphoma producing tumours in the jaw in African children a nasal tumour in China glandular fever in Europe and the USA and the majority of cases of Hodgkin's Disease everywhere This book tells the story of the discovery of the virus and the recognition of its connection with these various diseases an account that spans the world and involves some remarkable characters and individual stories

Research Awards Index, 1989 *Molecular Signatures of Infectious Agents in Cancer* M. Verma, 2002 The Cancer Biomarkers Research Group CBRG of the Division of Cancer Prevention DCP National Cancer Institute sponsored a workshop entitled Molecular Signatures of Infectious Agents in Bethesda Maryland September 7 8 2000 to identify molecular signatures of infectious agents and to utilize this information for risk assessment and development of prevention strategies against these infectious agents The specific objectives of the workshop were to review state of the science in detection technology that can identify extraneous genomic insertion in human cancers and to establish future research directions for using the molecular signatures of infectious agents for early detection risk assessment and prevention of cancer

Subject Index of Current Extramural Research Administered by the National Cancer Institute, 1978 [Epstein-Barr Virus and Human Disease · 1990](#) D. V. Ablashi, A. T. Huang, J. S. Pagano, G. R. Pearson, C. S. Yang, 2012-12-06 The Epstein Barr virus EBV isolated in 1966 continues to draw worldwide attention as an important human pathogen Its importance is largely related to the continuing accumulation of evidence that implicates EBV as an etiological factor for certain types of human cancer More recent investigations on this virus have focused on the identity of the viral genes responsible for the different disease manifestations observed following viral infection It is hoped that by thorough investigation of this virus clues to how cancer develops from a normal cell will surface In addition many of the gene products are now being exploited for the development of new and more sensitive tests for the diagnosis and clinical management of individuals with EBV associated

diseases Thus studies on this virus continue to provide new information of importance to our understanding of the malignant process In an effort to attract both basic and clinical scientists to the same meeting for purposes of scientific exchange and fostering a closer interaction between these individuals a series of international symposia was initiated in 1984 The first meeting was held in Loutraki Greece and was attended by approximately 100 participants The second international symposium was held in St Petersburg Florida in 1986 and was attended by approximately twice as many participants as attended the Loutraki meeting
